INTRODUCTION

1-1 Purpose. This pamphlet is authorized by and established in accordance with Federal Acquisition Regulation (FAR) 31.105 and Engineer Federal Acquisition Regulation (EFAR) SUBPART 31.105. This pamphlet establishes predetermined equipment ownership and operating expense rates for construction and marine equipment. Expense factors for dredges and attendant plant are provided for use in the development of rates associated with this type of equipment.

1-2. Applicability. This pamphlet applies to HQUSACE/OCE elements, major subordinate commands, districts, laboratories, and field operating activities. It is applicable to all solicitations and contracts for construction expected to exceed $25,000 when actual cost data for both ownership and operating costs cannot be determined. This volume is for use in Region IX which includes the following states:

Alaska

1-3. References. See APPENDIX A.

1-4. Use. The use of this pamphlet for rate determination on construction contracts, dredging contracts, and negotiated procurements relates only to equipment which is contractor-owned.

a. This pamphlet shall be used for determining hourly equipment rates which are contained in the independent government estimate (IGE).

b. In addition, the use of this pamphlet will be required by contractors for pricing contractor-owned equipment in negotiated procurements when:

(1) Cost or pricing data as defined in FAR 15.8 is not required.

(2) Cost or pricing data is required and the actual cost data to support either ownership or operating costs for equipment or equipment groups of similar model and series is not available.

(3) Cost or pricing data is required and available, but all or part of the data is determined not to be in accordance with the cost principles of the FAR.

1-5. Assistance. If assistance is required understanding the methodology or calculating equipment rates, contact the Chief, Cost Engineering Branch, CENPW-EN-CB, Corps of Engineers, Walla Walla District. The district can also provide the computer software program "CHECKRATE" for use in expediting construction and dredging equipment rate calculations. There is a nominal charge to non-government users for this software.

1-6. How to Obtain this Publication. Copies of Volumes 1 through 12 of this pamphlet are available only through the Superintendent of Documents or their government bookstores (see APPENDIX A). For additional information phone (202)783-3238 or write to the following address:

CHAPTER 2

METHODOLOGY FOR CONSTRUCTION EQUIPMENT

SECTION I. GENERAL

2-1. Contents. This chapter provides the methodology used to compute the total hourly ownership and operating rates for construction equipment and marine equipment (except major dredging plant). This detailed methodology includes the formulas and factors used to develop both total hourly rates and hourly standby rates.

2-2. Basis for Equipment Rates. Hourly rates as shown in TABLE 2-1, Hourly Equipment Ownership and Operating Expense, reflect equipment prices based on 1 July 1990 as the date of purchase. Area factors used to compute regional ownership and operating expenses are listed in APPENDIX B, Area Factors. This hourly rate methodology assumes that equipment furnished to the job is in sound, workable condition. Furthermore, the methodology applies only to that equipment which prime contractors or subcontractors either own or control. These hourly rates and cost factors do not represent rental charges for those in the business of renting equipment.

2-3. Total Hourly Rate. Total hourly rates for average conditions shown in TABLE 2-1 are computed on the basis of a 40-hour work week. This total rate is the sum of ownership cost and operating cost. TABLE 2-2, Hourly Rate Elements, contains all individual rate elements. An example of the methodology used to compute the total hourly rate is shown in Figure 2-1.

a. Ownership Cost Elements. The ownership portion of the rate consists of an allowance for depreciation and facilities capital cost of money (FCCM).

b. Operating Cost Elements. Operating costs include allowances for the following:

(1) Fuel
(2) Filters, oil, and grease (FOG) (includes servicing)
(3) Repairs, which include maintenance and major overhauls
(4) Tire wear (replacement)
(5) Tire repair

c. Exclusions to Hourly Rates. Total hourly rates include all elements of cost for owning and operating equipment except the following:

(1) Operating labor
(2) Mobilization and demobilization
(3) Field office overhead expenses

(4) Home office or G&A overhead expenses
(5) Investment tax credit
(6) Contingency allowance
(7) Profit
(8) Other elements of cost as listed in paragraph 2-18

It should also be noted that replacement cost escalation is not included in the rates because it is not an allowable item of cost per FAR 31.105(d).

SECTION II. OPERATING CONDITIONS

2-4. Average, Difficult, or Severe Condition. Operating conditions may be average, difficult, or severe. Rates for both average and severe operating conditions are determined in accordance with APPENDIX C, Guide for Selecting Operating Conditions. Difficult conditions are the arithmetic mean of average and severe rates. If only the average rate is shown in TABLE 2-2, that rate will apply for all operating conditions. Average condition rates are included in both TABLE 2-1 and TABLE 2-2. Only TABLE 2-2 contains the severe condition rates.

2-5. Determination of Condition. For contract modifications the contracting officer determines the equipment operating condition to be used based on the contract specifications, the basis of any supporting evidence, and APPENDIX C guidance. Evaluation of operating conditions for equipment not listed in APPENDIX C will be consistent with examples shown in APPENDIX C. The operating condition of the equipment relates to the average and severe factors as detailed in APPENDIX D, Equipment Hourly Expense Calculation Factors.

SECTION III. EQUIPMENT VALUE

2-6. List Price + Accessories. Equipment cost is based on the total catalog list price for the equipment. The catalog list price for this pamphlet is based on new equipment manufactured in 1990. The total price also includes those accessories normally purchased by the contractor plus all required safety features.

2-7. Discount Code (DC). A 7.5 percent discount is taken on the total list price plus accessories for all equipment except highway trucks which are discounted 15.0 percent. The identification of the discount is shown in APPENDIX D under column heading DC (Discount Code), where B equals the basic discount of 7.50 percent and S equals the special discount of 15.0 percent.

2-8. Sales or Import Tax. Total state sales tax (which includes local taxes) or import tax is computed as a percentage of the discounted price. The amount of tax is given in APPENDIX B.

2-9. Freight. Estimated allowances for freight are given in APPENDIX B. This allowance includes preparation and delivery.

Multiply the shipping weight based on hundred weight (CWT) by the freight rate to determine freight charges.

2-10. Total Equipment Value (TEV) . Freight is added to the total discounted price (which includes sales tax) to arrive at the TEV. The estimated TEV is indicated in TABLE 2-1 under the column heading VALUE. When developing equipment rates for contract modifications, use the actual equipment price if it is known. Also, if the equipment is overage or was purchased used, refer to Chapter 3, Adjustment to Rates.

SECTION IV. LIFE

2-11. Economic Life. LIFE is the expected economic life of the equipment and will vary based on the type of equipment and the condition of use. It is established from manufacturers' or equipment associations' recommendations. The expected economic life in hours is given in APPENDIX D, under the column heading LIFE, for both average and severe conditions.

2-12. Working Hours Per Year. Annual average operating hours have been established for equipment working within the region covered by this pamphlet. The number of working hours per year (WHPY) as shown in APPENDIX B is equivalent to one year's use for a single shift operation. Average hours of use per year are determined by reducing the maximum available hours per year (40 hours per week, 52 weeks per year) to allow for lost working days due to the following factors:

a. Weather
b. Employee holidays
c. Equipment maintenance and repairs
d. Mobilization and demobilization
e. Miscellaneous downtime.

SECTION V. SALVAGE VALUE

2-13. Salvage Value (SLV). Salvage values for equipment are based on the Green Guide for Construction Equipment, Handbook of New and Used Construction Equipment Values, and advertisements of used equipment for sale as displayed in current engineering and construction magazines.

2-14. Salvage Value Percentages. The salvage value percentage used for each type of equipment is listed in APPENDIX D under the heading SLV as a percentage of the equipment value. It is equal for both average condition and severe condition.

SECTION VI. OWNERSHIP COST

2-15. Ownership Elements. The ownership portion of the rate consists of allowances for depreciation (DEPR) and Facilities Capital Cost of Money (FCCM). These two cost elements are computed based on the total equipment value. Other ownership

elements may be allowed (see paragraph 2-18). Total ownership rate per hour is expressed by formula, as follows:

$$\text{Ownership Rate/Hour} = \text{DEPR/Hour} + \text{FCCM/Hour}$$

2-16. Depreciation. The straight-line method is used to compute depreciation.

a. For rubber-tired equipment the tire cost index (TCI) must first be established to complete the depreciation formula in the sample worksheet.

b. Depreciation Calculation. Depreciation is calculated by dividing the "depreciable" value (total equipment value less estimated salvage and tire cost) by the expected economic life of the unit of equipment in hours. Expressed by formula, depreciation cost equals the following:

$$\text{DEPR/Hr} = \frac{[[(\text{TEV})\ (1-\text{SLV})] - [(\text{TCI})(\text{Tire Cost})]]}{\text{LIFE}}$$

where:

(1) Total equipment value (TEV) - see TABLE 2-1

(2) Salvage value (SLV) - see APPENDIX D

(3) Tire cost index (TCI). Tire and conveyor belt cost is considered to be an operating expense and is subtracted from the total equipment value before computing depreciation. If tire costs based on the date of manufacture are not known, current tire values are modified using the TCI. The TCI is determined by dividing the year of manufacture by present year using the appropriate tire indexes. These indexes are listed as part of APPENDIX E, Economic Indexes for Construction Equipment (see EK100, All Tires and Tubes).

(4) Tire cost. The tire cost for rubber-tired equipment is based on tire values taken at the time the equipment was manufactured. Estimated values for tires and conveyor belting are provided in APPENDIX F, Tire Description and Tire Cost (this data is provided for information only). Since APPENDIX F does not contain pricing information for all types and sizes of tires and belts, dealers should be contacted for any additional information.

(5) LIFE - see APPENDIX D

2-17. Facilities Capital Cost of Money

a. Facilities Capital Cost of Money (FCCM), as defined in FAR 15.903, FAR 31.205-10, and CAS 414, is included in the total hourly rates. This cost was computed by multiplying the January 1993 cost-of-money rate (6.50%) determined by the Secretary of the Treasury pursuant to P.L. 92-41 (85 Stat. 97) by the average

value of equipment and prorating the result over the annual operating hours. This cost-of-money rate was reduced 25.0% to 5.20% to avoid duplication when applying estimated markups for overhead and profit. The Department of the Treasury adjusts the cost-of-money rate on or about 1 January and 1 July each year; these revisions are printed in the Federal Register. Expressed by formula, FCCM cost equals the following:

$$\text{FCCM/Hr} = \frac{(\text{AVF})\ (\text{TEV})\ (5.20\%)}{(\text{WHPY})}$$

where:

(1) AVF = Average value factor, <u>or</u>

AVF = [[(N-1) (1 + SLV)] + 2] / 2N

(2) N = Number of years in depreciation period, <u>or</u>
N = LIFE / WHPY

(3) 5.20% = Current cost-of-money rate (6.50%) / 1.25

2-18. <u>Other Ownership Elements</u>. The following elements of cost are allowable but would normally be included in the contractor's field office or home office overhead rate calculation.

a. License fees, property taxes, storage, and insurance costs are considered indirect costs and are not included in the total hourly rates.

b. Also job-site security, inspection fees, record-keeping, mechanic's training, and highway permits are excluded from the total hourly rate for each unit of equipment.

SECTION VII. OPERATING COST

2-19. <u>Operating Cost Elements</u>. The total operating cost is the sum of the following five elements: fuel, FOG (filters, oil, and grease), repairs, tire wear, and tire repair.

2-20. <u>Fuel Cost</u>. Fuel costs are computed for each gas, diesel, or electric engine. If the unit of equipment has two engines, as in the case of a truck crane, this methodology treats each engine separately for fuel costs. Fuel costs are calculated for each engine, as expressed in the following formula:

Fuel Cost/Hr = Fuel Factor x Horsepower x Fuel Cost/Gallon

a. Hourly Fuel Costs. The estimated hourly fuel cost for each unit of equipment is shown under the column heading FUEL in TABLE 2-1 and TABLE 2-2. If the unit of equipment has no engine, no fuel cost will be shown. See Chapter 3 for fuel adjustments.

b. Fuel Factor - Gas or Diesel Fuel. The fuel factor in gallons per bhp (brake horsepower) hour is listed in APPENDIX D for

both average and severe conditions. Fuel factors are also listed for both equipment, prime engine, and the carrier engine. For severe conditions the fuel consumption rate is 30 percent greater than the average conditions rate. Compute gas or diesel fuel factors by using the following formula:

$$\text{Fuel Factor (Gal/bhp-hr)} = \frac{\text{HPF x lbs. Fuel per bhp-hr}}{\text{lbs of Fuel per Gallon}}$$

where:

(1) Bhp is the net brake horsepower of the engine at the flywheel at sea level and at full-load governed speed. The engine is fully equipped with generator, fan, air cleaner, and other regular equipment. All horsepower ratings for engine-driven equipment are listed with the equipment description in TABLE 2-1.

(2) HPF is the horsepower factor used in the fuel and electricity consumption formulas and represents the average percent of full rated horsepower being utilized by the engine. It is necessary to modify the rated horsepower as engines and motors in actual production do not work at their full-rated horsepower at all times. The fuel consumption factors, which are shown in APPENDIX D under column headings Fuel Factor-Equipment and Fuel Factor-Carrier, are computed to include the HPF which is shown for information only.

(3) Lbs. Fuel (consumed) per bhp-hr is based on the following estimate:

gasoline = 0.62 lbs. per bhp-hr
diesel = 0.39 lbs. per bhp-hr

(4) Fuel weight per gallon is based on the following estimate:

gasoline = 6.00 lbs. per gallon
diesel = 7.00 lbs. per gallon

c. Fuel factor- Electricity. Assuming that an electric motor uses 1 kW/hp (considering all inefficiencies), and using the same HPF for gas or diesel fuel consumption, the electricity consumption is computed by the following formula:

$$\text{Fuel Factor (kW/Hr)} = \text{HPF x 1 kW per electric hp hour}$$

d. Fuel and Electricity Costs. The cost per gallon for gasoline and diesel fuel used to compute the hourly fuel costs are shown in APPENDIX B. The hourly fuel costs for all gasoline powered equipment, diesel powered highway trucks, and truck crane carriers include an allowance for federal and state road taxes, sales taxes, and rental for fuel storage tanks and pumps. Costs per kilowatt hour for electricity used to compute electricity costs are also shown in APPENDIX B.

2-21. Filters, Oil, and Grease (FOG) Cost. FOG cost is computed as a percentage of the hourly fuel costs. In APPENDIX D under the column heading FOG, these percent allowances are expressed as a decimal factor under each fuel type heading: E (electricity), G (gas), or D (diesel). Fog cost is calculated for each engine using the following formula:

Fog Cost/Hr = FOG Factor x Fuel Cost/Hr x LAF

a. The FOG element contains all items of cost for routine servicing of the equipment including the following:

(1) Base wages for servicing labor
(2) Fringe benefits and labor burden costs for servicing
(3) Service truck and fuel truck allowance
(4) Other equipment costs for servicing
(5) Filters, oil, and grease allowance
(6) Taxes and shipping for FOG supplies

b. The FOG percentage allowance is reduced for servicing which is normally performed by the oiler who is assigned separately to the unit of equipment (and costed elsewhere). This reduction applies to the following equipment: cranes, draglines, hydraulic excavators, and shovels (except equipment under category numbers C75, C80.01, C85.11, C85.12, C85.21, C90.01, H25.11, H25.12, H30.01, H30.02, and M10.32)

c. The labor adjustment factcr (LAF) is used to adjust the FOG factor to account for geographic variations in labor and parts costs. The factor for the region covered by this pamphlet is given in APPENDIX B.

d. If the unit of equipment has no engine, a reasonable hourly estimate for FOG is included.

2-22. Repair Cost. The repair cost is an allowance for equipment repairs, maintenance, and major overhauls (including undercarriage wear) performed in cither the field or the shop. Where tire cost is the cost of the tires when the equipment was manufactured, use the same TCI and tire cost as shown in the depreciation calculation (see paragraph 2-16). The estimated hourly rate for repairs is computed as follows:

$$\text{Repair Cost/Hr} = \frac{[(\text{TEV}) - [(\text{TCI})(\text{Tire Cost})]] \times \text{Repair Factor}}{\text{LIFE}}$$

a. Repair Factor. The repair factor is calculated as follows:

Repair Factor (RF) = Repair cost factor (RPR) x EAF x LAF

b. Use the following multiplying factors to develop the repair factor:

(1) The estimated repair cost factor (RPR) is shown in APPENDIX D. This factor varies depending on the operating condition of the equipment (average or severe).

(2) The economic adjustment factor (EAF) is used to adjust the repair cost factor to current price levels. The EAF is equal to the economic index for the present year divided by the economic index for the year the equipment was manufactured. APPENDIX E, Economic Indexes for Construction Equipment, is used to develop the EAF. Economic indexes are determined as follows:

(a) Economic Index for the Present Year. Find the present year and corresponding index in APPENDIX E for the equipment division in question. If the index for the present year has not been included, future year indexes can be estimated using a straight-line projection.

(b) Economic Index for the Year of Manufacture. This is the economic index for the year the equipment was manufactured (can be determined from equipment serial numbers). Locate the index number in APPENDIX E for the year and equipment division. If the actual age of the equipment is beyond the last year of its economic life, refer to Chapter 3 for further rate adjustments.

c. Items Included in the Repair Cost Factor. The estimated percentage allowances for the repair cost factor are shown in APPENDIX D under the column heading RPR and are expressed as decimal factors. These repair cost factors (for both the average and severe conditions) compensate for the following cost elements:

(1) Mechanic's labor includes base wages, fringe benefits, supervision, and all other costs for labor associated with craft workers engaged in the direct repair of equipment.

(2) Repair parts and supplies includes those items which are required for all repairs and major overhauls complete with applicable sales taxes and freight charges.

(3) Service trucks and other equipment utilized during repair and maintenance work, including tools.

(4) Supporting repair facilities includes field and main repair shops complete with parts and supplies inventory, and shop overhead.

2-23. Tire Costs. Tires included on rubber-tired equipment are generally the type and ply rating recommended as standard tires by the equipment manufacturer. Tire costs include both tire wear (replacement) and tire repair as individual elements of cost. Conveyor belt wear is also included under this cost element.

a. Tire Wear Cost. The formula for calculating tire wear applies to each tire position: front (FT), drive (DT), and trail-

ing (TT). However, all tires performing the drive function are considered as drive tires and are listed in the DT position. The total hourly tire wear cost for each unit of equipment is the sum of the hourly cost for each position. The hourly tire wear cost equals the current cost of new tires plus the cost of one recapping divided by the expected life of the new tires plus the life of the recapped tires. This hourly allowance for determining tire wear cost is expressed in the following formula:

$$\frac{\text{Tire Cost Factor x Current Tire Cost}}{\text{Tire Life Factor x Tire Wear Factor x Maximum Tire Life}}$$

where:

(1) Tire cost factor. It has been estimated that a recap costs approximately 50 percent of the new tire cost. Therefore, tire cost factor is 1.50, which represents the purchase of the original tire plus 1 recap.

(2) Current tire cost. The estimated current tire cost applies to all tires on the equipment in that position. For example, 4 new drive tires valued at $500 each would result in an amount of $2,000 for total drive tire cost. The size and cost of each tire used in the pamphlet are listed for information in APPENDIX F.

(3) Tire life factor. It has been estimated that a recap lasts approximately 80 percent of the life of a new tire. Therefore, total initial tire life factor is 1.80, which represents the purchase of the original tire plus 1 recap.

(4) Tire wear factor. Based on the position of the tire, type of equipment, and condition of use, tire wear factors have been developed and are listed in APPENDIX D. These factors will provide a percentage reduction to the maximum tire life. APPENDIX G, Tire Life and Tire Wear Factors, contains the methodology used to develop these factors and a computation example for a rear dump wagon.

(5) Maximum tire life. The maximum new tire life for various tire types is shown in APPENDIX G. It is expressed in hours in the above formula. The useful tire life is estimated using the method and tables in "Production and Cost Estimating of Material Movement with Earthmoving Equipment" prepared by Terex Division of General Motors.

b. Tire Repair Cost. It has been estimated that tire repairs are 15 percent of the total hourly tire wear cost. LAF is used to adjust the tire repair cost to account for geographic variations in labor and parts costs. This cost element has been calculated and listed separately in TABLE 2-2. It is expressed as a formula as follows:

$$\text{Tire Repair Cost} = \text{Total Tire Wear Cost} \times .15 \times \text{LAF}$$

c. Belt Cost. For equipment that uses conveyor belts, the belt wear is treated similarly to tire wear. The wear factors are listed in the front tire wear factor column in APPENDIX D. Belt life is shown in APPENDIX G and belt cost is listed in APPENDIX F.

SECTION VIII. STANDBY HOURLY RATES

2-24. Standby Hourly Rate. The standby rate is computed from the average condition rate by allowing the full FCCM hourly cost plus one-half of the hourly depreciation. It is expressed as a formula, as follows:

$$\text{Standby Rate/Hr} = (\text{DEPR/Hr} \times .50) + \text{FCCM/Hr}$$

The following conditions apply:

a. Paid standby will not exceed 40 hours per week (7 calendar days) per unit of equipment.

b. Standby will not be allowed during periods when the equipment would have otherwise been in idle status. Actual operating hours during a week will be credited against the 40 hours maximum standby allowance.

c. When the equipment is purchased used, standby will be computed on the basis that the equipment was purchased new by the contractor in the year it was manufactured. If the equipment is overage, the adjustments identified in Chapter 3 shall be used.

SECTION IX. RATE CALCULATION EXAMPLE

2-25. Computation Example. Figure 2-1, Equipment Rate Computation Worksheet, illustrates how the total hourly rates in TABLE 2-1 are computed.

a. When an hourly rate for a specific unit of equipment not included in this pamphlet must be computed, the methodology contained in Chapter 2 shall be followed. Software is also available for rate computation (see Chapter 1).

b. If the actual number of work hours per week is greater than 40 hours, see Chapter 3 for guidance on the use of shift adjustment factors (see TABLE 3-3, Shift Adjustment Factors for Ownership Costs).

c. See Chapter 3, Adjustments to Rates, for further guidance on the procedure for rate adjustment.

Use this worksheet to compute rates for equipment that is not in this pamphlet.

a. **Total Hourly Rate:** *(based on 40 hours per week)*

(Ownership Cost) + (Operating Cost)
[4.c.] [5.f]

(44.96 /Hr) + (42.96 /Hr) = $ 87.92 /Hr

b. **Standby Hourly Rate:**

[(Depreciation) x 0.50] + (FCCM)
[4.a.(2)] [4.b.(2)]

[(29.44 /Hr) x 0.50] + (15.52 /Hr) = $ 30.24 /Hr

(See Chapter 3 if rate adjustments are necessary.)

TABLE 2–1

HOURLY EQUIPMENT OWNERSHIP AND OPERATING EXPENSE

EXPLANATION OF TABLE HEADINGS

Example unit of equipment: American Crane, Model 5530, 75 Ton, 170–boom. (Based on average condition.)

CAT: C90 is the category number and identifies for Mechanical Cranes, Truck–Mounted (see APPENDIX D).

ID NO.: C90AM001 is the unique identification number for the above American Crane. AM = the manufacturer (see APPENDIX H, Manufacturer Codes). 001 = the numeric order of this unit of equipment within the manufacturer's listing.

MODEL: 5530 is the equipment model number.

EQUIPMENT DESCRIPTION: Specific information for each particular unit of equipment is described, such as "75 ton with a 170–foot boom" for the American Crane. The amount of horsepower and type of fuel used is stated. The American Crane carrier has a 238–horsepower engine and the crane has a 128–horsepower engine. Both engines are diesel (D)

VALUE (TEV): This column reflects the predetermined "equipment cost" used to compute the rates and is based on equipment purchased new in 1990.

TOTAL HOURLY RATES: All ownership and operating expenses for the average condition are included. All cost elements including fuel are totaled in the AVERAGE column. The STANDBY column includes the hourly allowance for equipment on legitimate standby status.

ADJUSTABLE ELEMENTS. This column shows ownership elements and fuel costs broken out of the AVERAGE column so they can be adjusted as indicated in Chapter 3. Operating costs may be determined by subtracting the ownership cost elements (DEPR plus FCCM) from the total hourly rate for the average condition. Fuel price adjustments can be performed to the total hourly cost shown under the FUEL column.

CWT: The shipping weight of the equipment is stated in hundredweight.

CHAPTER 3

ADJUSTMENTS TO RATES

SECTION I. RATE ADJUSTMENTS

3-1. Contents. This chapter explains the procedures for adjusting the hourly rates shown in TABLE 2-1 which are calculated for a given set of factors. Rate adjustment tables have been developed from equations used to calculate the ownership portion of the rate and standby costs.

3-2. Conditions for Adjustment. These rates shall be adjusted using the guidance in this chapter whenever one or more of the following conditions exist:

a. If difficult conditions are justified by the contract (see paragraph 2-4).

b. If the contractor's equipment is not the same age as the equipment listed in this pamphlet (see examples shown in TABLE 3-1, Equipment Age Adjustment Factors for Ownership Costs, and paragraph 3-5).

c. If the cost-of-money rate for the time period in question is different than that shown in Chapter 2 (see paragraph 3-4a(2)).

d. If fuel costs differ by more than 10% from the cost shown (see paragraph 3-4b(1)).

e. If the actual hours worked exceeded 40 hours per week (see example shown in TABLE 3-3, Shift Adjustment Factors for Ownership).

3-3. Use of Rate Adjustment Tables. TABLES 3-1, 3-2, and 3-3 are used to adjust the hourly rates in TABLE 2-1. Hourly rates for construction equipment for both average and severe conditions are given in TABLE 2-2, Hourly Rate Elements.

a. These tables can be used when the actual unit of equipment is known, as in the case of most negotiated procurements. These tables provide reasonable adjustment factors to allow a short-cut method for adjusting an hourly rate when actual conditions are considered, as in the case of contract modifications.

b. The rate adjustment tables may be used in lieu of a step-by-step rate computation when cost or pricing data is available, provided that the unit of equipment listed in the pamphlet is equivalent in size, capacity, and horsepower to the contractor's actual unit of equipment.

3-4. Hourly Rate Elements. Individual cost elements, which comprise the total hourly rate, are shown in TABLE 2-2. These hour-

ly rate elements are listed by equipment identification number corresponding to each unit of equipment shown in TABLE 2-1.

a. Ownership cost elements. These elements consist of depreciation (DEPR) and facilities capital cost of money (FCCM).

(1) Total ownership (DEPR + FCCM) can be adjusted to account for actual age of the equipment. The hourly ownership elements shown in TABLE 2-2 can be factored for age using TABLE 3-1.

(2) FCCM Adjustment. If the cost-of-money rate shown in Chapter 2 is no longer current, the FCCM portion of the rate shall be adjusted upward or downward to match the cost-of-money rate for the period of use in question. For example, if the cost-of-money rate should increase by 10% (say from 8.50% to 9.35%), then 10% of the hourly FCCM cost (from TABLE 2-2) will be added to the total hourly rate. See APPENDIX I, Federal Cost of Money Rate, for a listing of cost-of-money rates (shown through June 1993).

b. Operating cost elements. These consist of fuel (FUEL), filters, oil, and grease (FOG), repairs (RPR), tire wear (TIRE WEAR), and tire repair (TIRE RPR).

(1) Hourly fuel costs shall be adjusted in the event the average fuel prices f.o.b. jobsite vary by more than 10 percent above or below the price assumed in Appendix B. For example, if the price per gallon should increase by 15 percent, then 15 percent of the hourly fuel cost will be added to the total hourly rate. The contractor shall be required to furnish copies of all fuel supply contracts and invoices to the government to support fuel cost adjustment. Request for upward adjustment in the rates will be considered only when fuel is supplied by recognized distributors.

(2) The hourly FOG allowance shall be adjusted upward or downward in conjunction with any authorized fuel price revisions.

(3) There is no rate adjustment procedure for repairs, tire wear, or tire repair.

3-5. Overage Equipment

a. When a unit of equipment has exceeded the economic life given in APPENDIX D, it is considered overage and the ownership portion of the rate shall be adjusted. This adjusted rate will not exceed the rate for the same unit of equipment that is not overage.

b. The total hourly operating rate for overage equipment shall be computed on the basis that the equipment is as old as possible without exceeding the LIFE as shown in APPENDIX D. In other words, the base year for determining overage equipment value is the year for which the last factor in TABLE 3-1 is given.

If there is no comparable unit of equipment shown in TABLE 2-1, the total hourly rate can be computed following the example shown in Figure 3-1.

c. Age adjustment factors are listed in TABLE 3-2, Equipment Age Adjustment Factors for Standby Costs, for factoring the standby rate shown in TABLE 2-1, provided the equipment is not overage. If the equipment is overage, compute the standby rate as shown in the example in Figure 3-2. Overage standby computations shall be based on the actual purchase price and the year of manufacture.

3-6. Equipment Purchased Used. A detailed methodology for computing a total hourly rate for equipment purchased used is not included in this pamphlet. Examples shown in TABLE 3-1 illustrate the basic principles for estimating used equipment rates.

a. The condition of the equipment at the time of purchase considers the extent of capital improvements, mechanical condition of drive train, and previous hours of operation. These conditions are difficult or impossible to determine and to evaluate when computing a total hourly rate based on actual acquisition cost.

b. When actual cost data in accordance with Chapter 1 is not available, a total hourly rate and standby rate for equipment purchased used can be computed on the basis that the equipment was purchased new by the contractor in the year it was manufactured. Consideration for the actual age of used equipment may require an adjustment for overage.

3-7. Equipment Not Listed. When a unit of equipment is not listed in TABLE 2-1, the hourly rate may be determined by using the hourly rate listed for a similar piece of equipment or by proportioning a rate listed so that capacity, size, and horsepower are properly considered. When an hourly rate cannot be determined using TABLE 2-1, rates will be calculated following the methodology outlined in Chapter 2 and the adjustments explained in this chapter.

SECTION II. EQUIPMENT SELECTION

3-8. Truck Selection. Because of the large number of possible combinations of highway truck chassis and bodies, both are listed separately. For estimating purposes, use the gross vehicle weight (GVW) rating of the truck chassis to make a selection, with the following conditions:

a. The combined weight of the truck chassis, the truck body, and the payload must not exceed the GVW rating shown for the truck chassis.

b. The gross combined weight (GCW) of the truck, trailer, and payload must not exceed the GCW rating shown.

3-9. Crawler Tractor Selection. Because of the various number of dozer and ripper combinations available for each crawler tractor, the tractors and attachments may be shown separately. Only the hourly expense for those attachments that are required to perform the work shall be allowed. It should be noted that some makes and models of crawler tractors include the blade attachment while others require all attachments to be added separately.

3-10. Equipment Accessories. Equipment accessories included on the major pieces of equipment in TABLE 2-1 are listed in APPENDIX J, Equipment Accessories.

3-11. Rate Calculation Example. Figure 3-1, Total Hourly Rate Calculation for Overage Equipment, illustrates how total hourly rates are adjusted for overage equipment. Figure 3-2, Standby Rate Calculation for Overage Equipment, gives a sample calculation for computing adjusted standby rates. Rate software is also available for rate computation (see Chapter 1).

TABLE 3–1

EQUIPMENT AGE ADJUSTMENT FACTORS FOR OWNERSHIP COSTS

(EXAMPLE)

The "Equipment Age Adjustment Factors for Ownership Costs" in TABLE 3–1 are used when the age of an unit of equipment is other than the age of the equipment listed in TABLE 2–1. The factors given in TABLE 3–1 are multiplied by the hourly ownership costs when shown in TABLE 2–1 and result in an ownership rate adjusted for the actual age of the equipment being considered. When the "life" of the equipment has exceeded the economic service life given in APPENDIX D, the age will be determined as given in paragraph 3–2.b.

EXAMPLE: Assume that a 50–ton truck crane, manufactured in 1990, (category C90.02) listed in TABLE 2–1 has a total hourly rate of $55.00 per hour and an ownership rate of $30.00 per hour.

A. If an equivalent crane owned by a contractor had been purchased new in 1985, the total hourly rate can be determined as follows:

Total hourly rate	$55.00
Ownership rate	($30.00)
Ownership adjusted for age	$24.00
(ownership rate = $30.00) x (age adjustment factor = .80)	
Adjusted total hourly rate	$49.00

B. If an equivalent crane owned by a contractor had been purchased new in 1972, this crane is overage and the total hourly rate can be determined as follows:

Total hourly rate	$55.00
Ownership rate	($30.00)
Ownership adjusted for age	$17.10
(ownership rate = $30.00) x (oldest age adjustment factor = .57)	
Adjusted total hourly rate	$42.10

C. If an equivalent crane, manufactured in 1972, had been purchased used in 1982 by the contractor, the crane is overage and the rate computation would be identical to Example B.

D. If an equivalent crane, manufactured in 1985, had been purchased used in 1987 by the contractor, the used crane is not overage and the rate computation would be identical to Example A.

TOTAL HOURLY RATE CALCULATION FOR OVERAGE EQUIPMENT

EXAMPLE

Assume the following set of given information for the rate calculation example:

A. **The unit of equipment is not listed in TABLE 2-1**

B. The equipment is contractor-owned

C. Data for the unit in question:

1. Clark front-end wheel loader
2. Model 125B, 4WD, 4 CY capacity
3. Serial number indicates year of manufacture = 1980
4. Actual purchase price was $119,995 in 1980
5. Horsepower is 210 hp
6. Drive tire size = 23.5 x 25, 16 PR, L-3

   Drive tire cost = 4 tires x $2,524 = $10,096 (in 1993)

D. TABLE 3-1, Age Adjustment Factors for Ownership Costs:

1. Category L40.11 (wheel loaders < 225 hp)
2. Last age adjustment factor - 1986

E. Adjust the actual purchase price:

1. Index APPENDIX E (wheel loaders EK = 45)

   a. 1986 = 3991 (first year of economic life)

   b. 1980 = 2938 (year of manufacture)

2. Purchase price (TEV) indexed to 1986:
   (Purchase price includes discount, sales tax & freight)

   (3991 / 2938) x $119,995 = $163,002

F. Hourly rate is computed as follows in accordance with Figure 2-1, Equipment Rate Computation Worksheet

Figure 3-1. Total Hourly Rate Calculation for Overage Equipment

Use this worksheet to compute rates for equipment that is not in this pamphlet.

TABLE 3-2

EQUIPMENT AGE ADJUSTMENT FACTORS FOR STANDBY COSTS

(EXAMPLE)

The "Age Adjustment Factors for Standby Costs" in TABLE 3-2 are used when the age of a piece of equipment is other than the age of the equipment listed in TABLE 2-1. The factors given in TABLE 3-2 are multiplied by the hourly standby costs shown in TABLE 2-1 and result in a standby rate adjusted for the actual age of the equipment being considered. When the "life" of the equipment has exceeded the economic service life given in APPENDIX D, the age will be determined as given in paragraph 2-24.

EXAMPLE: Assume that a 50-ton truck crane (manufactured in 1990) listed in TABLE 2-1 has an hourly standby rate of $18.00 per hour. If an equivalent crane owned by a contractor had been purchased new in 1987, the hourly standby rate can be determined as follows:

Hourly Standby rate (per hour)	$18.00
Standby adjusted for age (per hour) (Standby rate = $18.00) x (Age adjustment factor = .86)	$15.48

STANDBY RATE CALCULATION FOR OVERAGE EQUIPMENT

EXAMPLE

Assume the following set of given information for the rate calculation example:

A. **The unit of equipment is not listed in TABLE 2-1**

B. The equipment is contractor-owned

C. Data for the unit in question:

1. Clark front-end wheel loader
2. Model 125B, 4WD, 4 CY capacity
3. Serial number indicates year of manufacture = 1980
4. Actual purchase price was $119,995 in 1980
5. Horsepower is 210 hp
6. Drive tire size = 23.5 x 25, 16 PR, L-3

   Drive tire cost = 4 tires x $2,524 = $10,096 (in 1993)

D. TABLE 3-2, Age Adjustment Factors for Standby Costs:

1. Category L40.11 (wheel loaders < 225 hp)
2. Last age adjustment factor - 1987

E. Use the actual cost data as follows:
(See paragraph 3-5.c.)

1. Purchase price (TEV) = $119,995
2. Year of manufacture = 1980

F. Estimate rate as follows in accordance with Figure 2-1, Equipment Rate Computation Worksheet for Standby Calculations

Figure 3-2. Standby Hourly Rate Calculation for Overage Equipment

Use this worksheet to compute rates for equipment that is not in this pamphlet.

TABLE 3–3

SHIFT ADJUSTMENT FACTORS FOR OWNERSHIP COSTS

(EXAMPLE)

The "Shift Adjustment Factors" in TABLE 3–3 are used when the working hours per week are greater than 40 hours per week. The factors given in TABLE 3–3 are multiplied by the adjusted hourly ownership cost (if adjusted for age) and the result in an ownership rate adjusted for working hours other than 40 hours per week.

EXAMPLE: Assume that the truck crane in Example A of TABLE 3–1 is to be worked 10 hours per day, 6 days per week (60 hours per week). The total hourly rate for this piece of equipment can be determined as follows (service life = 16,000 hours).

Total hourly rate (adjusted for age)	$49.00
Ownership rate per hour (adjusted for age)	($24.00)
Ownership rate per hour adjusted for work hours (Ownership rate = $24.00) x (Shift adjustment factor = .88)	$21.12
Adjusted total hourly rate	$46.12

CHAPTER 4

METHODOLOGY FOR DREDGING PLANT

SECTION I. GENERAL

4-1. Contents. This chapter contains the methodology used to compute ownership and operating rates for dredging plant.

4-2. General. Use rates for ownership and operating costs have not been developed for dredging plant since this type of equipment is normally custom designed and built.

a. Ownership and operating cost factors as shown in TABLE 4-1 are for various types of plant. When a type of plant is not listed, the expense factors may be estimated by using the factors listed for a similar type of plant.

b. This rate methodology applies only to dredges and floating attendant plant engaged in any type of large scale dredging operation. Small portable hydraulic dredges with discharge diameters of 12 inches or less, clamshell dredges less than 5 cubic yard capacity, and marine equipment (non-dredging) not listed in TABLE 4-1 shall have rates developed using the methodology in Chapter 2.

c. Hopper dredge factors and rate methodology are not included in this chapter. These factors have been omitted primarily due to the limited number of hopper dredges and the complexity of the methodology used to calculate rates. Hopper dredge rates can be determined using the Corps of Engineers' Dredge Estimating Program (CEDEP). Information on dredge estimating programs can be obtained by contacting the Jacksonville District Cost Engineering Branch.

SECTION II. ANNUAL USE

4-3. Time Available to Dredge.

a. The number of months available per year for the contract dredge shall be based on the work time available to dredge, excluding downtime for major repairs including work in dry dock, bad weather, and environmental restrictions. However, due to the mobility of the dredge, uncertainty of environmental regulations, and other constraints placed on the dredge, the availability is difficult to determine. Therefore Figure 4-1, Months Available by Region, depicts estimated months available for dredging based on data collected from Corps of Engineers' regional dredge estimating teams. This information shall be used in lieu of available months being specified in the contract documents.

b. The basis for estimating operating hours of use per month must be documented in the estimate by the cost engineer.

MONTHS AVAILABLE TO DREDGE BY REGION

Region	Type of Dredge Operation		
	Pipeline	Bucket	Hopper
Atlantic Coast and tributaries	9	10	10
Gulf Coast, Lower Mississippi (St. Louis south) and tributaries	10	10	11
Great Lakes, Upper Mississippi (St. Louis north) and tributaries	8	8	8
West Coast and tributaries	9	9	9

Figure 4-1. - Months Available by Region

SECTION III. LIFE

4-4. Economic Life. The expected economic life in thousands of hours for various types of dredge plant shown in TABLE 4-1 is based on average dredging conditions. The values for estimated economic life are based on working in salt water conditions. If adjustments need to be made, the adjustment should be made only for the time required to dredge the exceptional material. Adjustments can be made under the following circumstances:

a. When more severe conditions are encountered, such as the dredging of very abrasive sand or rock, the expected life should be decreased.

b. When better than average conditions are encountered, such as dredging mud or silt, the expected life should be increased.

c. When the dredged material is a combination of various types, a weighted average should be estimated and the expected life adjusted accordingly.

4-5. Annual Hours Available. The annual hours available to dredge can be established for each type of plant based on the months available and the estimated monthly hours worked. The total annual hours available can be expressed by formula, as follows:

Available Hours/Year = Months Available x Hours/Month

4-6. Life in Years. Based on the estimated economic life of the dredge plant in hours and the annual hours available, the life in years is determined. The life in years will vary depending on these parameters and is expressed by formula, as follows:

Life in Years (N) = Life in Hours / Available Hours per Year

SECTION IV. SALVAGE VALUE

4-7. Salvage Value. The salvage value (SLV), expressed as a decimal, is shown in TABLE 4-1 for different types of plant.

SECTION V. OWNERSHIP COST

4-8. Ownership Cost. Ownership expense is expressed as a percent of plant value, which is defined as the actual acquisition cost plus any initial capital improvements. The value of initial capital improvements should be based on those betterments which were made within one year of purchase. Capital improvements should not include any replacement or repair work.

a. The ownership rate is determined from the plant value and the total expense rate for depreciation and FCCM. When cost or pricing data is available, the actual acquisition price shall be used. Otherwise, the value of a similar piece of plant is used and, if necessary, adjusted so that capacity, size, and horsepower are properly considered.

b. Ownership expense is determined on an yearly basis using the following formula:

Ownership Per Year = Plant Value x (DEPR + FCCM)

where:

DEPR = Ownership percent per year for depreciation

FCCM = Ownership percent per year for Facilities Capital Cost of Money

4-9. Depreciation. Depreciation is computed using the straight-line method. The depreciable value is the acquisition cost, plus initial capital improvements, less estimated salvage. The basis for determining the yearly percentage factor for depreciation is expressed by formula, as follows:

DEPR %/Year = 1-SLV / N

where:

N = Life in Years
SLV = Salvage Value

4-10. Facilities Capital Cost of Money. Facilities capital cost of money (FCCM) is computed as shown in paragraph 2-17, except that FCCM is determined on a yearly basis instead of an hourly basis and is expressed here as an annual percentage factor. The cost-of-money rate (CMR) in effect at the time the work is performed or current rate shall apply. This formula is expressed as follows:

$$\text{FCCM \%/Year} = \frac{[(N-1)(1+SLV)+2](CMR)}{2N}$$

where:

CMR = Cost-of-money rate reduced by 25.0% for overhead and profit allowance

4-11. Other Ownership Elements. Taxes, storage (lay-up), and insurance are considered indirect (overhead) costs (see Chapter 2). These are not included in ownership rates since they vary by geographic areas and with individual contractors. These costs should not be duplicated in the estimate or submitted proposal.

SECTION VI. OPERATING FACTORS

4-12. Hourly Operating Factors. Dredge plant operating factors are shown in TABLE 4-1. The hourly operating factors provided are estimated. It is intended that these factors be used only if the estimator does not have factual data available.

4-13. Prime and Secondary Power. Prime power refers to the primary operating engine for the dredge or other piece of attendant plant. Secondary power refers to all other secondary engines or power plants. If more than one of these engines is present, the horsepower should be totaled. Fuel consumption factors are prepared on the same basis as Chapter 2. If the estimator has more specific fuel consumption information, the horsepower factor (HPF) may be adjusted to reflect job conditions. The HPF factor is shown for information only in non-decimal format.

4-14. Water, Lube, and Supplies (WLS). This factor is similar to the FOG factor described in Chapter 2. This item is computed as either a percentage of the hourly fuel costs or, if the type of plant has no engine, a reasonable hourly cost should be included. This factor does not include an allowance for the oiler normally assigned to the dredge or other piece of dredge plant.

4-15. Repairs (RPR). This factor includes an allowance for all major and minor repairs and is similar to the maintenance and repair cost factor described in Chapter 2. The economic adjustment factor (EAF) and the labor adjustment factor (LAF) are required to develop this cost. It should be noted that the repair allowance does not include the following estimated additive items:

a. Excessive dredge wear for parts such as cutter teeth and main suction pumps are not included due to the wide variety of materials being dredged. Bucket wear for mechanical dredges is estimated as an additive item or treated as a separate unit of equipment from TABLE 2-1. Allowances for wear due to abrasive material should only be included as an additive item if it is warranted and is not considered elsewhere in the estimate.

b. Dry docking costs, which represent an allowance for rental of the dry dock facility, are not included because they vary greatly depending on the facilities available. Repairs incurred while in dry dock, which occur periodically, are in the repair factor (RPR). Dry docking costs will be allocated on an average annual basis over the years between such occurrences (in accordance with FAR 31.205-24).

c. There is no predetermined allowance in the dredge plant methodology for jobsite yard costs, mobilization, or demobilization. All of these cost elements must be separately estimated to match each project's construction conditions.

4-16. Standby Rate. The standby rate is computed by allowing the full FCCM rate plus one-half of the depreciation. In addition to the standby ownership rate, it may be necessary on dredges to include a generator fuel allowance to account for operation of a diesel engine generator for power to operate pumps, navigation lights, etc. Standby will not be allowed during periods when the plant would have otherwise been in idle status.

SECTION VII. RATE CALCULATION EXAMPLE

4-17. Rate Calculation Example. The following example shown in Figure 4-2, Dredge Plant Ownership and Operating Worksheet, illustrates the use of TABLE 4-1 and the regional data to generate a rate.

a. Ownership is determined by calculating yearly percentages to account for FCCM and depreciation. Operating costs are determined by utilizing formulas from Chapter 2 for FUEL, FOG (WLS), and REPAIRS.

b. For illustration purposes, assume that a 24" hydraulic dredge was purchased new in 1985 for $3,700,000 including tax and delivery, and there were no initial capital improvements. This example uses 500 hours per month and a reduced cost-of-money rate (CMR) of 5.20%.

e. WLS (Water, Lube & Supplies Factor)..... > 24 % = 0.24

f. RPR (Repair Cost Factor)..... > 110 % = 1.10

5. Life in Years:

a. Months Available per year..... > 9 months/year

b. Hours Available per year: = (Hours Worked per Month x Months Available per year)

(500 hrs/mo x 9 mos/yr) = 4,500 hours/year

c. N (Life in years): = (Life in Hours / Hours Available Per Year)

(60,000 hours / 4,500 hours/yr) = 13.33 years

SHEET 2 of 5

FIGURE 4-2 — DREDGE PLANT OWNERSHIP AND OPERATING RATE WORKSHEET (continued)

6. Ownership Expense Percent per Year

a. Depreciation Percent (%): = (1.0 – SLV) / N

(1.0 – 0.10) / 13.33 = 6.75%

b. FCCM Percent (%): = [(N–1)(1+SLV) + 2] x Discounted Money Rate / 2N

[(13.33 – 1)(1 + 0.10) + 2] x 5.200% / (2 x 13.33) = 3.04%

c. Total Ownership Percent Per Year....(6.75% + 3.04%) = 9.79%

7. OWNERSHIP COSTS:

a. Yearly Ownership Expense: = (Total Plant Value x Total Yearly Ownership %)

($3,700,000 x 9.79%) = $362,230 /year

b. Monthly Ownership Expense: = (Yearly Ownership Expense / Yearly Months Available)

($362,230 /yr / 9 mos/yr) = $40,248 /month

8. OPERATING COSTS:

a. Fuel Cost = (Engine Fuel Factor x HP x Fuel Cost/Gal)

(1) Prime Engine Fuel:

(0.045 x 3,730 HP x $1.03 /gal) = $172.89 /hour

(2) Secondary Engine Fuel:

(0.039 x 2,475 HP x $1.03 /gal) = $99.42 /hour

b. Water, Lube & Supply Cost = (WLS factor x Hourly Fuel Cost)

(1) Prime Engine WLS:

(0.24 x $172.89 /Hr) = $41.49 /hour

(2) Secondary Engine WLS:

(0.24 x $99.42 /Hr) = $23.86 /hour

SHEET 3 OF 5

FIGURE 4–2 – DREDGE PLANT OWNERSHIP AND OPERATING RATE WORKSHEET (continued)

8. OPERATING COSTS (Continued):

c. Repair Cost:

(1) EAF (Economic Adjustment Factor)

= (Economic Index for Present Year / Economic Index for Acquisition Year)

(4718 <for 1993> / 3749 <for 1985>) = 1.258

(2) Repair Cost:

= (Total Plant Value x RPR x EAF x LAF) / Life in hrs

($3,700,000 x 1.10 x 1.258 x 1.190) / 60,000 hrs = $101.55 /hour

d. Total Hourly Operating Cost = (Fuel + WLS + Repairs)

($172.89 + $99.42 + $41.49 + $23.86 + $101.55) = $439.21 /hour

e. Monthly Operating Cost: = (Total Hourly Operating Cost x Hours Worked per Month)

($439.21 /hour x 500 hours/month) = $219,605 /month

9. SUBTOTAL MONTHLY EXPENSE = (OWNERSHIP + OPERATING)

($40,248 /month + $219,605 /month) = $259,853 /month

10. ESTIMATED ADDITIVE ITEMS (Sheet 1, Item k.):

a.	(1)	Dredge Wear (Mud, Sand or Gravel)	$8,000	/month
	(2)	Dry Docking (Use of Facilities)	$8,000	/month
	(3)	Yard cost (Support)	$5,000	/month
	(4)			/month
	(5)			/month
b.		Subtotal – Estimated Additive Items	$21,000	/month

11. TOTAL MONTHLY RATE (Items 9 + 10 b.) $280,853 /month

See Following Sheet for Standby Allowance.

SHEET 4 OF 5

FIGURE 4-2 – DREDGE PLANT OWNERSHIP AND OPERATING RATE WORKSHEET (continued)

12. STANDBY ALLOWANCE

a. Yearly Standby Expense:

= [((0.50 x Depr. %) + FCCM %) x Plant Value]

[((0.50 x 6.75%) + 3.04%) x $3,700,000] = $237,355 /year

b. Monthly Standby Expense:

= (Yearly Standby Expense / Yearly Months Available)

($237,355 /yr / 9 mos/yr) = $26,373 /month

c. STANDARD HOURLY STANDBY EXPENSE:

= (Monthly Standby Expense / Hours Worked per Month)

($26,373 /month / 500 hours/month) = $52.75 /hour

An additional generator fuel allowance may be allowed under certain circumstances. This allowance is applicable to dredges only.

d. Generator Fuel Allowance for a Dredge:

= ((Generator HP / Total Secondary HP) x Secondary Fuel Cost)

((200 HP / 2,475 HP) x $99.42) = + $8.03 /hour

e. TOTAL HOURLY STANDBY ALLOWANCE FOR A DREDGE:

= (Standby Allowance + Generator Fuel Allowance)

($52.75 + $8.03) = $60.78 /hour

PART 31
CONTRACT COST PRINCIPLES AND PROCEDURES

SUBPART 31.1 -- APPLICABILITY

31.105 Construction and Architect-Engineer Contracts.

(d)(2)(i)(A) When the contracting officer cannot determine actual cost data for both ownership and operating costs for any piece of equipment or groups of similar serial or series equipment from the contractor's accounting records, ownership and operating costs for that equipment shall be determined in accordance with the Construction Equipment Ownership and Operating Expense Schedule published by the U.S. Army Corps of Engineers. The contracting officer shall insert the following statement in all solicitations and contracts for construction within the United States expected to exceed $25,000.

EQUIPMENT OWNERSHIP AND OPERATING EXPENSE SCHEDULE.

(a) Allowable cost for construction and marine plant and equipment in sound workable condition owned or controlled and furnished by a contractor or subcontractor at any tier shall be based on actual cost data for each piece of equipment or groups of similar serial and series for which the Government can determine both ownership and operating costs from the contractor's accounting records. When both ownership and operating costs cannot be determined for any piece of equipment or groups of similar serial or series equipment from the contractor's accounting records, costs for that equipment shall be based upon the applicable provisions of EP 1110-1-8, "Construction Equipment Ownership and Operating Expense Schedule," Region *. Working conditions shall be considered to be average for determining equipment rates using the schedule unless specified otherwise by the contracting officer. For equipment not included in the schedule, rates for comparable pieces of equipment may be used or a rate may be developed using the formula provided in the schedule. For forward pricing, the schedule in effect at the time of negotiations shall apply. For retrospective pricing, the schedule in effect at the time the work was performed shall apply.

(b) Equipment rental costs are allowable, subject to the provisions of FAR 31.105(d)(ii) and FAR 31.205-36 substantiated by certified copies of paid invoices. Rates for equipment rented from an organization under common control, lease-purchase or sale-leaseback arrangements will be determined using the schedule except that rental costs leased from an organization under common control that has an established practice of leasing the same or similar equipment to unaffiliated lessees are allowable. Costs for major repairs and overhaul are unallowable.

---

* Insert the Roman numeral for the appropriate region of the schedule.

APPENDIX A

SECTION III:
EFAR REFERENCE (Continued)

31 July 1989 31.1-2

(c) When actual equipment costs are proposed and the total amount of the pricing action is over $25,000, cost or pricing data shall be submitted on Standard Form 1411, "Contract Pricing Proposal Cover Sheet." By submitting cost or pricing data, the contractor grants to the contracting officer or an authorizing representative the right to examine those books, records, documents and other supporting data that will permit evaluation of the proposed equipment costs. After price agreement the contractor shall certify that the equipment costs or pricing data submitted are accurate, complete and current. Insert the Roman numeral for the appropriate region of the schedule.

(d) This does not apply to terminations. See 49.113(100) and FAR Part 49.

GOVERNMENT BOOKSTORES

U.S. Government periodicals are sold by the Office of the Superintendent of Documents. Orders may be placed by mail from the following address.

Superintendent of Documents
P. O. Box 371954
Pittsburgh, PA 15250-7954

Orders may also be placed by telephone or fax (Visa/Mastercard is accepted)

Telephone: (202) 783-3238 -or- Fax: (202) 512-2250.

Regional government bookstores can also be contacted for orders (see list).

RETURN POLICY: Publications are not accepted for exchange or credit unless an error was made in filling your order .

When ordering, give the following information:

Title of Publication:	EP 1110-1-8, "Construction Equipment Ownership and Operating Expense Schedule"
Region:	Region I through XII
Volume No.	Volume No. 1 through 12

AREA FACTORS

The area factors given in this Appendix were used to compute the hourly equipment rates shown in Table 2-1

Total State Sales or Import Tax Rate	0.00	%
Working Hours Per Year (WHPY)	1,150	hrs/yr
Labor Adjustment Factor (LAF)	1.19	
Electricity Cost Per Kilowatt-Hour	$ 0.100	/kW-Hr
Gasoline Cost Per Gallon	$ 1.29	/gal
Diesel Cost Per Gallon (Off-Road Use)	$ 1.03	/gal
Diesel Cost Per Gallon (On-Road Use)	$ 1.19	/gal
Cost-of-Money Rate (Full Rate)	6.50	%
Cost-of-Money Rate (Adjusted)	5.20	%

Freight Rates

	0 cwt	thru	240 cwt	$ 35.80 /cwt
over	240 cwt	thru	300 cwt	$ 32.50 /cwt
over	300 cwt	thru	400 cwt	$ 24.90 /cwt
over	400 cwt	thru	500 cwt	$ 18.20 /cwt
over	500 cwt	thru	700 cwt	$ 17.20 /cwt

APPENDIX C

GUIDE FOR SELECTING OPERATING CONDITIONS (continued)

EQUIPMENT TYPE	AVERAGE	SEVERE
L30: Loaders, Belt	Working below rated capacity, with intermittent service.	Working at or above rated capacity with continuous service.
Depreciation Period (Hours):	10,000 hours	8,000 hours
L35: Loaders, Front End Crawler Type	Bank excavation, intermittent ripping, basement digging of natural bed clays, sands, silts, gravels. Some traveling. Steady full throttle operations.	Loading shot rock, cobbles. High density materials in standard bucket. Continuous work on rock surfaces. Large amount of ripping of tight rock materials. High impact conditions. Salt water environment.
Depreciation Period (Hours):	10,000 hours	8,000 hours
L40: Loaders, Front End Wheel Type (does not include skid steer & tool carriers)	Continuous truck loading from stockpile. Low to medium density materials in properly sized bucket. Hopper charging in low to medium rolling resistance. Loading from bank in good digging. Load and carry on poor surfaces and slight adverse grades.	Loading shot rock (large loaders). Handling high density materials with counterweighted machine. Steady loading from very tight banks. Continuous work on rough or very soft surfaces. Load and carry in hard digging; travel longer distances on poor surfaces with adverse grades. Salt water environment.
Depreciation Period (Hours):	10,000 – 12,000 hours	8,000 – 10,000 hours
L45 & L50: Loaders with Backhoe Crawler Type and Wheel Type	Utility applications in medium to heavy soil. Occassional use of constant flow implements. Dig depths to 3.05m (10 ft.).	Production applications or digging in rock. Regular use of constant flow implements. Dig depths over 3.05m (10 ft.).
Depreciation Period (Hours):	10,000 hours	8,000 hours

APPENDIX C

GUIDE FOR SELECTING OPERATING CONDITIONS (continued)

EQUIPMENT TYPE	AVERAGE	SEVERE
L60: Log Skidders	Continuous turning, steady skidding for medium distances with moderate decking. Good underfooting: dry floor with few stumps and gradual rolling terrain.	Continuous turning, steady skidding for long distances with frequent decking. Poor underfoot conditions: wet floor, steep slopes, and numerous stumps. Salt water environment.
Depreciation Period (Hours):	10,000 hours	8,000 hours
M10 – .31 & .32 : Clamshell dredges < 5 cy Amphibious Excavator	Gravels, silts, breakout force at less than capacity, fresh water conditions.	Rock, abrasive materials, load at rated capacity, salt water conditions.
Depreciation Period (Hours):	12,000 – 20,000 hours	10,000 – 18,000 hours
M10 – .51, .52, & .53 : Boats, Skiffs, Crew Boats, Work Boats, Survey Boats & Launches	Fresh water applications, light waves, steady to light use.	Salt water use, medium to high waves, heavy use.
Depreciation Period (Hours):	12,000 – 14,000 hours	10,000 – 12,000 hours
P35: Pipelayers	Typical pipelayer use in operating conditions ranging from very good to severe.	Continuous use in deep mud or water or on rock surfaces.
Depreciation Period (Hours):	12,000 hours	10,000 hours
R10: Rippers and Bank Slopers	Light rock, medium breakout force required.	Hard rock, excessive wear due to high breakout force.
Depreciation Period (Hours):	8,000 hours	6,500 hours

APPENDIX C

GUIDE FOR SELECTING OPERATING CONDITIONS (continued)

EQUIPMENT TYPE	AVERAGE	SEVERE
S10, S15, S20 & S 25: Scrapers Self–Propelled Tractor Drawn Soil Stabilizers	Varying loading and haul road conditions. Long and short hauls. Adverse and favorable grades. Some impact. Typical road–building use on a variety of jobs.	High impact conditions, such as loading ripped rock. Continuous high total resistance conditions. Rough haul roads. Overloading.
Depreciation Period (Hours):	10,000 – 12,000 hours	8,000 – 10,000 hours
T15: Tractors Crawler (Dozer)	Production dozing in clays, sands, gravels, and talus rock. Push–loading scrapers, borrow pit ripping, most landclearing and skidding applications. Medium impact conditions. Production landfill work.	Heavy rock ripping. Tandem ripping. Pushloading and dozing in hard rock. Work on rock surfaces. Continuous high impact conditions. Salt water environment.
Depreciation Period (Hours):	10,000 – 12,000 hours	8,000 – 10,000 hours
T20: Tractors Wheel Type (Dozer)	Production dozing, pushloading in clays, sands, silts, loose gravels. Shovel cleanup.	Production dozing in rock. Push–loading in rocky, boulder–strewn borrow pits. High impact conditions. Landfill compactor work.
Depreciation Period (Hours):	10,000 hours	8,000 hours
T30: Trenchers Chain & Wheel Type	Working in sands and silts below rated capacity of the machine.	Working in gravels and abrasive materials at or above the rated capacity of the machine.
Depreciation Period (Hours):	8,000 – 10,000 hours	6,500 – 8,000 hours

APPENDIX C

GUIDE FOR SELECTING OPERATING CONDITIONS (continued)

EQUIPMENT TYPE	AVERAGE	SEVERE
T45 & T50: Truck Trailers Trucks, Highway	Varying loading and road conditions. Typical construction use on a variety of jobs.	Consistently poor road conditions. Oversized loading equipment.
Depreciation Period (Hours):	7,000 – 10,000 hours	5,500 – 8,000 hours
T55 & T60: Trucks, Off–Highway Trucks, Water, Off–Highway	Varying load and haul road conditions. High rolling resistance and poor traction during part of the job. Some adverse grades. Some impact loads. Typical use in road building, dam construction, open–pit mining, etc.	Continuous use on very poorly maintained haul roads, high rolling resistance and poor traction. Frequent adverse grades and high impact loads. Poorly matched loading equipment with continuous overloading.
Depreciation Period (Hours):	12,000 hours	10,000 hours
T65 – .20 & .40: Tunnel / Mining Equipment Tunnel Boring Machines Roadheaders Continuous Miners	Mining rock in average conditions, machine working below rated capacity.	Mining hard rock in severe working conditions, machine working at rated capacity.
Depreciation Period (Hours):	16,000 – 22,000 hours	14,000 – 20,000 hours
W10 & W15: Wagons Bottom Dump Rear Dump	Varying load and haul road conditions. Long and short hauls. High rolling resistance and poor traction during part of the job. Some adverse grades. Some impact. Typical road–building use in a variety of jobs, dam construction, open–pit mining, etc.	Continuous use on very poorly maintained haul roads, high rolling resistance and poor traction. High impact conditions, such as loading ripped rock. Frequent adverse grades and high impact loads. Poorly matched loading equipment with continuous overloading.
Depreciation Period (Hours):	12,000 hours	10,000 hours

APPENDIX F
TIRE DESCRIPTION AND TIRE COST

The current tire description and tire costs used to develop the rates in the TABLE 2-1 are tabulated on the following pages. These tire prices include allowances for contractor's discount, sales tax, excise tax, and tire tubes where applicable. This data is provided to give the user reasonable estimated values for the tires used in conjunction with rate development in this pamphlet. Belts for loaders are also included, these belts are sized by width (inches) x length (feet) and ply rating.

The prices in this appendix are based on 1992 price level.

APPENDIX G
TIRE LIFE AND TIRE WEAR FACTORS

SECTION I. TIRE WEAR FACTORS

The tire wear factors used in this pamphlet are listed in APPENDIX D. The "useful life" of a new tire is the product of Condition Factors (CF) from Group A through Group E multiplied by the Wheel Position Factor (WHP), and for drive tires only, the Grade Factor (GF). These factors provide a percentage reduction to the maximum tire life. Section II, Maximum Tire Life, states tire life in hours. (See paragraph 2–23.a)

Drive Tires: Useful Tire Life = (CF x WPF x GF)
All Other Tires: Useful Tire Life = (CF x WPF)

EXAMPLE *

	Condition Factors: (CF)	Average	Severe
A	Maintenance	1.00	1.00
B	Speeds	0.80	0.85
C	Curves	1.00	0.90
D	Surface Condition	0.90	0.70
E	Loads	0.90	0.80
CF	**Product of the factors (A x B x C x D x E)**	0.65	0.43

	Wheel Position Factors (WPF) – Wagon, Rear Dump		
WPF–FT	Front Tire (FT)	0.90	0.90
WPF–DTR	Drive Tire (DT) – Rear Dump	0.70	0.70
WPF–TT	Trailing Tire (TT)	1.00	1.00

GF	Grade Factor: (Drive Tires Only)	0.85	0.75

FINAL TIRE WEAR FACTORS:

Wagon, Rear Dump (APPENDIX D, Category W15)

Front Tire – Average = (CF = .65)(WPF–FT = .90)	0.59	
Front Tire – Severe = (CF = .43)(WPF–FT = .90)		0.39
Drive Tire – Average = (CF = .65)(WPF–DTR = .70)(GF = .85)	0.39	
Drive Tire – Severe = (CF = .43)(WPF–DTR = .70)(GF = .75)		0.22
Trailing Tire – Average = (CF = .65) (WPF–TT = 1.00)	0.65	
Trailing Tire – Severe = (CF = .43) (WPF–TT = 1.00)		0.43

* Condition Factors, Wheel Position Factors, and Grade Factor from GMC Terex Guide (see parapgrah 2–23.a.) Factors are specifically for a rear dump wagon.

APPENDIX G
TIRE LIFE AND TIRE WEAR FACTORS

SECTION II. MAXIMUM TIRE LIFE

Maximum tire life is used in the formula to determine tire wear cost. See paragraph 2-23.a.

MAXIMUM TIRE LIFE	Hours
Bias Ply Tires – Off highway E4, L4, and L5	7,000
Bias Ply Tires – All other bias tires	5,000
Radial Ply Tires – Off highway RL4	8,300
Radial Ply Tires – All other radial tires	6,000
Conveyor Belts	5,000

APPENDIX J

EQUIPMENT ACCESSORIES

In addition to features required for safety, the following accessories have been included with the major equipment listed in this pamphlet when they are not included with the basic cost and are offered by the manufacturer.

C85.10 CRANES, DRAGLINE & CLAMSHELL
CRAWLER MOUNTED

- Power load lowering
- Independent swing and travel
- Third drum
- Torque converter (machines 1–1/2 CY or larger)
- Approximately one–half maximum boom length)
- Counterweight

C85.20 CRANES, LIFTING,
CRAWLER MOUNTED

- Power load lowering
- Independent swing and travel
- Third drum
- Troque converter (machines 25 tons or larger)
- One–half maximum boom length
  (machines larger than 60 tons)
- Maximum boom length
  (machines larger than 60 tons)
- Counterweight

APPENDIX J (Continued)

EQUIPMENT ACCESSORIES

H25	EXCAVATORS, HYDRAULIC CRAWLER MOUNTED
	– Backhoe bucket (standard)
	– Backhoe stick (medium length)
	– Backhoe boom (one piece)
	– Backhoe bucket linkage (includes cylinder)
	– Guards
	– Counterweight
	– Alternator (heavy–duty) and lights
	– Tool kit
H35	HYDRAULIC SHOVELS – CRAWLER MOUNTED
	– Power load lowering
	– Torque converter (machines 1–1/2 CY or larger)
	– Counterweight
L30	LOADERS, BELT
	– Power unit
	– Head pully clutch and backstop
	– Belt cleaner and belt installing equipment
	– King pin attachment
L35	LOADERS, 1–1/2 CY AND LARGER
L40	– Reversible fan blade
	– Guard, power train
	– Automatic bucket positioner
	– Counterweight
	– Rock buckets (machines 4 CY or larger)
	– Alternator (heavy–duty) and lights
	– Tool kit

APPENDIX J (Continued)

EQUIPMENT ACCESSORIES

C90.01	TRUCK CRANES – LESS THAN 25 TONS
	– Power load loading
	– Third drum
	– Mechanical outriggers with screw jacks
	– Maximum boom length
	– Counterweight
C90.02	TRUCK CRANE – 25 TONS & LARGER
C90.03	– Power load loading
C90.04	– Third drum
	– Hydraulic outriggers with screw jacks
	– Torque converter when available (upper only)
	– Diesel engines
	– Maximum boom length
	– Counterweight
G15	GRADER
	– Enclosed operator cab
	– Scarifier
	– Front wheel lean
	– Power circle
	– Hydraulic shift and tilt moldboard
	– End bits
	– Alternator (heavy–duty) and lights
	– Tool kit

APPENDIX J (Continued)

EQUIPMENT ACCESSORIES

S10	SCRAPERS
S15	– Control single lever
S20	– Reversible fan blade
	– Flood light
	– Alternator (heavy–duty) and lights
	– Guards, power train
	– Tool kit
T15	TRACTOR, CRAWLER (DOZER)
	– Hydraulic controls for ripper and blade
	– Guards
	– Reversible fan blade
	– Alternator (heavy–duty) and lights
	– Hook, front pull
	– Track grousers (severe service for units over 200 hp)
	– Blades include counterweights where required
	– Tool kit
T20	TRACTOR, WHEEL (DOZER)
	– Hydraulic controls for ripper and blade
	– Guards
	– Reversible fan blade
	– Alternator (heavy–duty) and lights
	– Blades
	– Counterweight
	– Tool kit

APPENDIX J (Continued)

EQUIPMENT ACCESSORIES

T55	TRUCKS, OFF-HIGHWAY
	– No spin differential
	– Tacograph
	– Engine and transmission guards
	– Body liners
	– Tool kit
