CONSTRUCTION EQUIPMENT OWNERSHIP AND OPERATING EXPENSE SCHEDULE

1. Purpose. This pamphlet is authorized by and established in accordance with Federal Acquisition Regulation (FAR) 31.105 and Engineer Federal Acquisition Regulation (EFAR) SUBPART 31.105. This pamphlet establishes predetermined equipment ownership and operating expense rates for construction and marine equipment. Expense factors for dredges and attendant plant are provided in Chapter 4 for use in the development of rates associated with this type of equipment.

2. Applicability. This pamphlet applies to all USACE commands. It is applicable to all solicitations and contracts for construction expected to exceed the Simplified Acquisition Threshold of $100,000 when actual cost data for both ownership and operating costs cannot be determined. This volume is for use in Region IX which includes the following states:

Alaska

3. References. See **APPENDIX A**.

4. Distribution Statement. Approved for public release, distribution is unlimited.

CHAPTER 1

INTRODUCTION

1-1. Use. The use of this pamphlet for rate determination on construction contracts, dredging contracts and negotiated procurements relates only to equipment that is contractor-owned.

a. This pamphlet shall be used for determining hourly equipment rates that are contained in the independent government estimate (IGE).

b. In addition, the use of this pamphlet will be required by contractors for pricing contractor-owned equipment in negotiated procurements when:

(1) Cost or pricing data as defined in FAR Part 15 is not required.

(2) Cost or pricing data is required and the actual cost data to support either ownership or operating costs for equipment or equipment groups of similar model and series is not available.

(3) Cost or pricing data is required and available, but all or part of the data is determined not to be in accordance with the FAR cost principles.

1-2. How to Obtain Assistance. If assistance is needed in understanding the methodology for calculating equipment rates, contact the Chief, Cost Engineering Branch, Walla Walla District, Corps of Engineers, (CENWW-ED-C) telephone 509-527-7511 or 509-527-7510. The CENWW-ED-C Homepage is at http://www.nww.usace.army.mil/html/offices/ed/cb/cepage.htm.

1-3. How to Obtain CHECKRATE Software. A spreadsheet named "**CHECKRATE**" has been developed to calculate equipment rates using the methodology required by EP1110-1-8. The user must have Microsoft Excel for Windows, Version 5.0 or newer, to run the application. The factors needed in the hourly costs calculations are located in the Appendixes of the EP1110-1-8. A copy of the software may be obtained at http://www.nww.usace.army.mil/html/offices/ed/cb/ep/checkrat.htm.

1-4. How to Obtain this Publication. Volumes 1 through 12 of this pamphlet are available in Portable Document Format (PDF) only and can be viewed or downloaded at http://www.usace.army.mil/inet/usace-docs/eng-pamphlets/cecw.htm. Copies of the CD-ROM (Volumes 1-12) are also available through either the Superintendent of Documents or government bookstores (see APPENDIX A). For additional information telephone 202-512-1800, FAX 202-512-2250, or access on the Internet at http://www.access.gpo.gov/su_docs.

CHAPTER 2

METHODOLOGY FOR CONSTRUCTION EQUIPMENT

SECTION I. GENERAL

2-1. Contents. This chapter provides the methodology used to compute the total hourly ownership and operating rates for construction equipment and marine equipment (except dredging plant). This detailed methodology includes the formulas and factors used to develop both total hourly rates and hourly standby rates. If the equipment is determined to be older than its estimated economic life (overage) or was purchased used, refer to Chapter 3, Adjustments to Rates.

2-2. Basis for Equipment Rates. The hourly rates shown in TABLE 2-1, Hourly Equipment Ownership and Operating Expense Schedule reflect catalog list prices of three-year old equipment manufactured in 1996. Area factors are used to compute regional ownership and operating expenses and are listed in APPENDIX B, Area Factors. This hourly rate methodology assumes that equipment furnished to the job is in sound, workable condition. Furthermore, the methodology applies only to equipment which prime contractors or subcontractors either own or control. These hourly rates and cost factors do not represent rental charges for those in the business of renting equipment.

2-3. Total Hourly Rate. Hourly rates for average conditions are shown in TABLE 2-1 and computed based on a 40-hour workweek. The hourly rate is the sum of ownership and operating costs. TABLE 2-2, Hourly Rate Elements, contains all individual rate elements for both average and severe conditions. An example of the methodology used to compute the total hourly rate is shown in Figure 2-1. For standby calculation, see Section IX, Standby Hourly Rate.

a. Ownership Cost Elements. The ownership portion of the rate consists of an allowance for depreciation and facilities capital cost of money (FCCM).

b. Operating Cost Elements. Operating costs include allowances for the following:

Fuel
Filters, oil, and grease (FOG) (includes servicing)
Repairs, which include maintenance and major overhauls
Tire wear (replacement)
Tire repair

c. Exclusions to Hourly Rates. Total hourly rates for owning and operating equipment do not include allowances for the following:

Operating labor
Mobilization and demobilization

Field office overhead expenses
Home office or G&A overhead expenses
Investment tax credit
Contingency allowance
Profit

It should also be noted that replacement cost is not included in the rates, as it is not an allowable item of cost per FAR 31.105(d)(2)(i).

d. Other Ownership Elements. The following elements of cost are not included in the total hourly rates. These costs are allowable and would normally be included in the contractor's field office or home office overhead rate calculation.

(1) License fees, property taxes, storage, and insurance costs are considered indirect costs and are not included in the total hourly rates.

(2) Jobsite security, inspection fees, record keeping, mechanic's training, and highway permits are also not included in the total hourly rates.

SECTION II. OPERATING CONDITIONS

2-4. Average, Difficult, or Severe Conditions. Operating conditions may be average, difficult, or severe. Rates for both average and severe operating conditions are determined in accordance with APPENDIX C, Guide for Selecting Operating Conditions. Rates for the difficult condition is the arithmetic mean of the average and the severe rates. If only the average rate is shown in TABLE 2-2, that rate will apply for all operating conditions. Average condition rates are included in both TABLE 2-1 and TABLE 2-2. Only TABLE 2-2 contains the severe condition rates.

2-5. Determination of Condition. For contract modifications the contracting officer determines the equipment operating condition to be used based. This determination is based on the contract specifications, the site conditions, the basis of any supporting evidence, and APPENDIX C guidance. Evaluation of operating conditions for equipment not listed in APPENDIX C will be consistent with examples shown in APPENDIX C. The operating condition of the equipment relates to the average and severe factors as detailed in APPENDIX D, Equipment Hourly Expense Calculation Factors.

SECTION III. EQUIPMENT SELECTION

2-6. General. Equipment shown in TABLE 2-1 is representative of equipment that is used in general construction. Note that some equipment may require additional attachments or accessories. Each unit of equipment is grouped into a main group called a Category (CAT) and a sub group called a Subcategory (SUB). This type of

grouping is displayed in Table 2-1 and Appendix D. Also an Identification Number (ID.NO.) is assigned to each unit of equipment. The ID.NO. consists of three parts. The first three characters is the CAT, the second two characters is the manufacturers code (Appendix H) and the last three characters is the sequence number.

2-7. Truck Selection. Because of the large number of possible combinations of highway truck chassis and bodies, both are listed separately. For estimating purposes, use the gross vehicle weight (GVW) rating of the truck chassis to make a selection, with the following conditions:

a. The combined weight of the truck chassis, truck body, and payload must not exceed the GVW rating shown for the truck chassis.

b. The gross combined weight (GCW) of the truck, trailer, and payload must not exceed the GCW rating shown.

2-8. Crawler Tractor Selection. Because of the various number of blade and ripper combinations available for each crawler tractor, all tractors include a blade attachment. Other blade and ripper attachments are shown separately. Only the hourly expense for those attachments that are required to perform the work shall be allowed.

2-9. Equipment Accessories. Equipment accessories included on the major pieces of equipment in TABLE 2-1 are listed in APPENDIX J, Equipment Accessories.

SECTION IV. EQUIPMENT VALUE

2-10. List Price + Accessories. The total list price includes those accessories normally purchased by the contractor plus required safety features. Some units of equipment may no longer be manufactured; they will continue to be included in the pamphlet as representative models until equivalent replacement units can be identified.

2-11. Discount Code. A 7.5 percent discount is taken on the total list price plus accessories for all equipment except highway trucks that are discounted 15.0 percent. The identification of the discount is shown in APPENDIX D under column heading DC (Discount Code), where B equals the basic discount of 7.5 percent and S equals the special discount of 15.0 percent.

2-12. Sales or Import Tax. Total state sales tax (which includes local taxes) or import tax is computed as a percentage of the discounted price. The amount of tax is given in APPENDIX B.

2-13. Freight. Estimated allowances for freight are given in APPENDIX B. This allowance includes preparation and delivery. Multiply the shipping weight based on hundred weight (CWT) by the freight rate to determine freight charges.

2-14. Total Equipment Value (TEV). Freight is added to the total discounted price (which includes sales tax) to arrive at the TEV. The estimated TEV is indicated in TABLE 2-1 under the column heading VALUE.

SECTION V. LIFE

2-15. Economic Life. LIFE is the expected economic life of the equipment and will vary based on the type of equipment and the condition of use. It is established from manufacturers' or equipment associations' recommendations. The expected economic life in hours is given in APPENDIX D, under the column heading LIFE, for both average and severe conditions.

2-16. Working Hours Per Year. Annual average operating hours has been established for equipment working within the region covered by this pamphlet. The number of working hours per year (WHPY) as shown in APPENDIX B is equivalent to one year's use for a single shift operation. Average hours of use per year are determined by reducing the maximum available hours per year (40 hours per week, 52 weeks per year) to allow for lost working days due to the following factors:

Weather
Employee holidays
Equipment maintenance and repairs
Mobilization and demobilization
Miscellaneous downtime

SECTION VI. SALVAGE VALUE

2-17. Salvage Value (SLV). Salvage values for equipment are based on the *Green Guide for Construction Equipment, Handbook of New and Used Construction Equipment Values*, and advertisements of used equipment for sale as displayed in current engineering and construction magazines.

2-18. Salvage Value Percentages. The salvage value percentage used for each type of equipment is listed in APPENDIX D under the heading SLV as a percentage of the equipment value. It is equal for both average condition and severe condition.

SECTION VII. OWNERSHIP COST

2-19. Ownership Elements. The ownership portion of the rate consists of allowances for depreciation (DEPR) and Facilities Capital Cost of Money (FCCM). These two cost elements are computed based on the total equipment value. Other ownership elements may be allowed (see paragraph 2-3.d.). Total ownership rate per hour is expressed by formula, as follows:

Ownership Rate/Hour = DEPR/Hour + FCCM/Hour

2-20. Depreciation. The straight-line method is used to compute depreciation.

a. For rubber-tired equipment, the tire cost index (TCI) must first be established to complete the depreciation formula in the sample worksheet.

b. Hourly Depreciation is calculated by dividing the "depreciable" value (total equipment value less estimated salvage and tire cost) by the expected economic life of the unit of equipment in hours. Expressed by formula, depreciation cost equals the following:

$$\text{DEPR/Hr} = \frac{[(\text{TEV})(1-\text{SLV})] - [(\text{TCI})(\text{Tire Cost})]}{\text{LIFE}}$$

Where:

(1) Total Equipment Value (TEV) - see TABLE 2-1

(2) Salvage Value (SLV) - see APPENDIX D

(3) Tire Cost Index (TCI) is determined by dividing the year-of-manufacture tire index by present-year tire index. These indexes are listed as part of APPENDIX E, Economic Indexes for Construction Equipment (see EK100, All Tires and Tubes).

(4) Tire Cost is the tire and conveyor belt cost. This is considered an operating expense and is subtracted from the total equipment value before computing depreciation. The tire cost for rubber-tired equipment is based on tire values taken at the time the equipment was manufactured. If tire costs based on the date of equipment manufacture are not known, present-year tire values are modified using the TCI. Estimated values for tires and conveyor belting, based on the date of the pamphlet, are provided in APPENDIX F, Tire Description and Tire Cost (this data is provided for information only). Since APPENDIX F does not contain pricing information for all types and sizes of tires and belts, dealers should be contacted for any additional information.

(5) LIFE is based on the number of operating hours throughout the economic life of the equipment (see paragraph 2-15). Hours for LIFE are provided in APPENDIX D.

2-21. Facilities Capital Cost of Money. Facilities Capital Cost of Money (FCCM), as defined in FAR 31.205-10 and CAS 414, is included in the total hourly rates. This cost was computed by multiplying the January 1999 cost-of-money rate (5.00%) determined by the Secretary of the Treasury pursuant to P.L. 92-41 (85 Stat. 97) by the average value of equipment and prorating the result over the annual operating hours. This cost-of-money rate was reduced 25.0% to avoid duplication when applying estimated markups for overhead and profit. The discounted FCCM rate is then 4.00%. The

Department of the Treasury adjusts the cost-of-money rate on or about 1 January and 1 July each year; these revisions are printed in the Federal Register. Expressed by formula, FCCM cost equals the following:

$$\text{FCCM/Hr} = \frac{\text{(TEV) (AVF) (FCCM)}}{\text{(WHPY)}}$$

Where:

(1) Average Value Factor (AVF) =[[(N-1) (1 + SLV)] + 2] / 2N

(2) Number of years (N) in depreciation period = LIFE / WHPY

(3) Current cost-of-money rate (FCCM) = (5.00%) / 1.25 = 4.00%

SECTION VIII. OPERATING COST

2-22. Operating Cost Elements. The total operating cost is the sum of the following five elements: fuel, FOG (filters, oil, and grease), repairs, tire wear, and tire repair.

2-23. Fuel Cost. Fuel costs are computed for each gas, diesel, or electric engine. If the unit of equipment has two engines, as in the case of a truck crane, this methodology treats each engine separately for fuel costs. Fuel costs are calculated for each engine, as expressed in the following formula:

Fuel Cost/Hr = Fuel Factor x Horsepower x Fuel Cost/Gallon

a. Hourly Fuel Costs. The estimated hourly fuel cost for each unit of equipment is shown under the column heading FUEL in TABLE 2-1 and TABLE 2-2. If the unit of equipment has no engine, no fuel cost will be shown. See Chapter 3 for fuel adjustments.

b. Fuel Factor - Gas or Diesel Fuel. The fuel factor in gallons per bhp (brake horsepower) hour is listed in APPENDIX D for both average and severe conditions. Fuel factors are also listed for both the engine powering the main equipment (prime engine), and the engine providing power to the carrier vehicle. For severe conditions, the fuel consumption rate is 30 percent greater than the average conditions rate. Compute gas or diesel fuel factors by using the following formula:

$$\text{Fuel Factor (Gal/bhp-hr)} = \frac{\text{HPF x Lbs. Fuel per bhp-hr}}{\text{Lbs. of Fuel per Gallon}}$$

Where:

(1) Bhp is the net brake horsepower of the engine at the flywheel at sea level and at full-load governed speed. The engine is fully equipped with generator, fan, air cleaner,

and other regular equipment. All horsepower ratings for engine-driven equipment are listed with the equipment description in TABLE 2-1.

(2) HPF is the horsepower factor used in the fuel and electricity consumption formulas and represents an average percent of full rated horsepower being utilized by the engine. The fuel consumption factors, which are shown in APPENDIX D under column headings Fuel Factor-Equipment and Fuel Factor-Carrier, are computed based on the HPF shown under these column headings. This HPF is an estimate of the engine load under average working conditions. It is necessary to modify the rated horsepower as engines and motors in actual production do not work at their full-rated horsepower at all times. Periods spent at idle, travel in reverse, traveling empty, close maneuvering at part throttle, and operating downhill are examples of conditions that reduce the horsepower factor. Professional judgement regarding cycle time and equipment loading is applied to determine this average HPF. Normal field application can also vary according to: operator efficiency, type of material, type of work cycle, and overall job site efficiency. This pamphlet provides an estimated average HPF, not a specific factor.

(3) Fuel (consumed) per bhp-hr is an average based on a variety of engine applications from manufacturers engine data. The following constants represent an average of the normal application of equipment and are indicative of engine fuel consumption industry-wide.

Lbs. Fuel (consumed) per bhp-hr is based on the following estimate:

Gasoline = 0.60 lbs. per bhp-hr
Diesel = 0.36 lbs. per bhp-hr

Fuel weight per gallon is based on the following estimate:

Gasoline = 6.00 lbs. per gallon
Diesel = 7.00 lbs. per gallon

c. Fuel factor- Electricity. Assuming that an electric motor uses one kW/hp (considering all inefficiencies), and using the same HPF for gas or diesel fuel consumption, the electricity consumption is computed by the following formula:

Fuel Factor (kW/Hr) = HPF x 1 kW per electric hp hour

d. Fuel and Electricity Costs. The cost per gallon for gasoline and diesel fuel used to compute the hourly fuel costs are shown in APPENDIX B. The hourly fuel costs for all gasoline powered equipment, diesel powered highway trucks, and truck crane carriers include an allowance for federal and state road taxes, sales taxes, and rental for fuel storage tanks and pumps. Costs per kilowatt hour for electricity used to compute electricity costs are also shown in APPENDIX B.

2-24. Filter, Oil, and Grease (FOG) Cost. FOG cost is computed as a percentage of the hourly fuel costs.

a. The FOG element contains all items of cost for routine servicing of the equipment including the following:

Base wages for servicing labor
Fringe benefits and labor burden costs for servicing
Service truck, tools, and fuel truck allowance
Shop allowance when shop servicing is required
Other equipment costs for servicing
Filters, oil, and grease allowance
Taxes and shipping for FOG supplies
Handling and disposal of hazardous materials and oils

b. FOG cost is calculated for each engine using the following formula:

FOG Cost / Hr = FOG Factor x Fuel Cost/Hr x LAF

Where:

(1) FOG Factor is the percent allowance expressed as a decimal factor under each fuel type heading E (electricity), G (gas), or D (diesel). See APPENDIX D.

(2) Fuel Cost/Hr is a value calculated in paragraph 2-23.

(3) LAF (Labor Adjustment Factor) is a decimal factor used to adjust the FOG factor to account for regional variations in labor and parts costs. This factor is provided in APPENDIX B. LAF is also used to adjust the repair factor (RF) and the tire repair cost.

c. The FOG percentage allowance is reduced for servicing which is normally performed by the oiler who is assigned separately to the unit of equipment (and costed elsewhere). This reduction applies to the following equipment: cranes, draglines, hydraulic excavators, and shovels (except equipment under category numbers C75, C80.01, C85.11, C85.12, C85.21, C90.01, H25.11, H25.12, H30.01, H30.02, and M10.32)

d. When a unit of equipment has no engine (therefore no fuel costs calculated) and the equipment requires some type of fuel (i.e., propane, kerosene), an alternative hourly fuel/FOG allowance may be used in lieu of the regularly calculated fuel and FOG hourly costs. A FOG allowance may also be added when the equipment has no engine and has parts that require a FOG allowance. The alternative fuel allowance is added to the alternative FOG allowance for a total alternative fuel/FOG cost. (See Figure 2-1, 5.c)

2-25. Repair Cost. The repair cost is an allowance for equipment repairs, maintenance, and major overhauls (including undercarriage wear) performed in either the field or the shop. Where tire cost is the cost of the tires when the equipment was

manufactured, use the same TCI and tire cost as shown in the depreciation calculation (see paragraph 2-20). The estimated hourly rate for repairs is computed as follows:

$$\text{Repair Cost/Hr} = \frac{[(\text{TEV})-[(\text{TCI})(\text{Tire Cost})]] \times \text{Repair Factor}}{\text{LIFE}}$$

a. Repair Factor. The repair factor is calculated as follows:

Repair Factor (RF) = Repair cost factor (RCF) x EAF x LAF

b. Use the following multiplying factors to develop the repair factor:

(1) The repair cost factor (RCF) is shown in APPENDIX D. This factor varies depending on the operating condition of the equipment (average or severe).

(2) The economic adjustment factor (EAF) is used to adjust the repair cost factor to current price levels. The EAF is equal to the economic index for the present year divided by the economic index for the year the equipment was manufactured. APPENDIX E, Economic Indexes for Construction Equipment, is used to develop the EAF. Economic indexes are determined as follows:

(a) Economic Index for the Present Year. Find the present year and corresponding index in APPENDIX E for the type of equipment in question. If the index for the present year has not been included, future year indexes can be estimated using a straight-line projection.

(b) Economic Index for the Year of Manufacture. This is the economic index for the year the equipment was manufactured (can be determined from equipment serial numbers). Locate the index number in APPENDIX E for the year and type of equipment. If the actual age of the equipment is beyond the last year of its economic life the equipment is considered overage. Economic life is determined by dividing hours of LIFE (from APPENDIX D) by Working Hours Per Year (WHPY from APPENDIX B). Refer to Chapter 3 for rate adjustments.

c. Items Included in the Repair Cost Factor. The estimated percentage allowances for the repair cost factor are shown in APPENDIX D under the column heading RCF and are expressed as decimal factors. These repair cost factors (for both the average and severe conditions) compensate for the following cost elements:

(1) Mechanic's labor includes base wages, fringe benefits, supervision, and all other costs for labor associated with craft workers engaged in the direct repair of equipment.

(2) Repair parts and supplies includes those items which are required for all repairs and major overhauls complete with applicable sales taxes and freight charges.

(3) Service trucks and other equipment used during repair and maintenance work, including tools.

(4) Supporting repair facilities includes field and main repair shops complete with parts and supplies inventory, and shop overhead.

2-26. Tire Cost. Tires included on rubber-tired equipment are generally the type and ply rating recommended as standard tires by the equipment manufacturer. Tire costs include both tire wear (replacement) and tire repair as individual elements of cost. Conveyor belt wear is also included under this cost element.

a. Tire Wear Cost. The formula for calculating tire wear applies to each tire position: front (FT), drive (DT), and trailing (TT). However, all tires performing the drive function are considered as drive tires and are listed in the DT position. The total hourly tire wear cost for each unit of equipment is the sum of the hourly cost for each position. The hourly tire wear cost equals the current cost of new tires plus the cost of one recapping divided by the expected life of the new tires plus the life of the recapped tires. This hourly allowance for determining tire wear cost is expressed in the following formula:

$$\frac{\text{Tire Cost Factor x Current Tire Cost}}{\text{Tire Life Factor x Tire Wear Factor x Maximum Tire Life}}$$

Where:

(1) Tire Cost Factor is estimated at 1.50, which represents the purchase of the original tire plus one recap. It has been estimated that a recap costs approximately 50 percent of the new tire cost.

(2) Current Tire Cost is the estimated cost that applies to all tires on the equipment in that position. For example, 4 new drive tires valued at $500 each would result in an amount of $2,000 for total drive tire cost. The size and cost of each tire used in the pamphlet are listed for information in APPENDIX F.

(3) Tire Life Factor is estimated at 1.80, which represents the purchase of the original tire plus one recap. It has been estimated that a recap lasts approximately 80 percent of the life of a new tire.

(4) Tire Wear Factor is based on the position of the tire, type of equipment, and condition of use, tire wear factors have been developed and are listed in APPENDIX D. These factors will provide a percentage reduction to the maximum tire life. APPENDIX G, Tire Life and Tire Wear Factors, contains the methodology used to develop these factors and a computation example for a rear dump wagon.

(5) Maximum Tire Life expressed in hours is shown for various new tire types in APPENDIX F and APPENDIX G. The tire life is estimated from information provided by Goodyear Tire and Rubber Co. and by using the method and tables in "Production and

Cost Estimating of Material Movement with Earthmoving Equipment"prepared by Terex Division of General Motors.

b. Tire Repair Cost. It has been estimated that tire repairs are 15 percent of the total hourly tire wear cost. LAF is used to adjust the tire repair cost to account for regional variations in labor and parts costs. This cost element has been calculated and listed separately in TABLE 2-2. It is expressed as a formula as follows:

Tire Repair Cost = Total Tire Wear Cost x .15 x LAF

c. Belt Cost is for equipment that uses conveyor belts. The belt wear is treated like tire wear. The wear factors are listed in the front tire wear factor column in APPENDIX D. Belt life is shown in APPENDIX F and APPENDIX G, and belt cost is listed in APPENDIX F.

SECTION IX. STANDBY HOURLY RATE

2-27. Standby Hourly Rate. The standby rate is computed from the average condition by allowing the full FCCM hourly cost plus one-half of the hourly depreciation. It is expressed as a formula, as follows:

Standby Rate/Hr = (DEPR/Hr x .50) + FCCM/Hr

a. Paid standby shall not exceed 40 hours per week (7 calendar days) per unit of equipment. Actual operating hours during a week will be credited against the 40 hours maximum standby allowance.

b. Standby will not be allowed during periods when the equipment would have otherwise been in idle status.

c. When the equipment is purchased used, standby will be computed on the basis that the equipment was purchased new by the contractor in the year it was actually manufactured. Refer to Chapter 3 for rate adjustments.

SECTION X. RATE CALCULATION EXAMPLE

2-28. Computation Example. Figure 2-1, Equipment Rate Computation Worksheet, is an example of how the total hourly rates in TABLE 2-1 are computed. A blank Equipment Rate Computation Worksheet is included in Appendix A and can be copied as needed.

a. When an hourly rate for a specific unit of equipment is not included in this pamphlet and a rate must be computed, the methodology contained in Chapter 2 shall be followed. However, when a unit of equipment is not included in the pamphlet and the

necessary factors to compute a rate are not found in APPPENDIX D, please call for assistance as explained in Chapter 1. Software **(CHECKRATE)** is also available for rate computation (see Chapter 1).

b. See Chapter 3, Adjustments to Rates, for further guidance on the procedure for rate adjustments.

Use this blank worksheet to compute rates for equipment that are not in this pamphlet.

TABLE 2-1

HOURLY EQUIPMENT OWNERSHIP AND OPERATING EXPENSE

EXPLANATION OF TABLE HEADINGS

Example unit of equipment: American Crane, Model 5530, 75 Ton, 170-boom. (Based on average condition.)

CAT: C90 is the category number and identifies for Mechanical Cranes,Truck-Mounted (see APPENDIX D).

ID NO.: C90AM001 is the unique identification number for the above American Crane. AM equals the manufacturer (see APPENDIX H, Manufacturer Codes). 001 equals the numeric order of this unit of equipment within the manufacturer's listing.

MODEL: 5530 is the equipment model number.

EQUIPMENT DESCRIPTION: Specific information for each particular unit of equipment is described, such as "75 ton with a 170-foot boom" for the American Crane. The amount of horsepower and type of fuel used is stated. The American Crane carrier has a 238-horsepower engine and the crane has a 128-horsepower engine. Both engines are diesel (D)

VALUE (TEV): This column reflects the predetermined "equipment cost" used to compute the rates and is based on equipment purchased new in 1996.

TOTAL HOURLY RATES: All ownership and operating expenses for the average condition are included. All cost elements including fuel are totaled in the AVERAGE column. The STANDBY column includes the hourly allowance for equipment on legitimate standby status.

ADJUSTABLE ELEMENTS. This column shows ownership elements and fuel costs broken out of the AVERAGE column so they can be adjusted as indicated in Chapter 3. Operating costs may be determined by subtracting the ownership cost elements (DEPR plus FCCM) from the total hourly rate for the average condition. Fuel price adjustments can be performed to the total hourly cost shown under the FUEL column.

CWT: The shipping weight of the equipment is stated in hundredweight.

CHAPTER 3

ADJUSTMENTS TO HOURLY RATES

SECTION I. GENERAL

3-1. Contents. This chapter explains the procedures for adjusting the hourly rates shown in TABLE 2-1.

3-2. Basis for Equipment Rates. The rates shown in TABLE 2-1 are based on the catalog list price of three-year old equipment manufactured in 1996. Area factors used to compute regional ownership and operating expenses are listed in APPENDIX B, Area Factors. All equipment hourly rate elements for average and severe conditions are given in TABLE 2-2, Hourly Rate Elements. Individual cost elements, which comprise the total hourly rate, are shown in TABLE 2-2. These hourly rate elements are listed by equipment identification number, which corresponds to the equipment shown in TABLE 2-1.

a. Operating Costs consist of five cost elements: fuel (FUEL), filters, oil, and grease (FOG), repairs (REPAIR), tire wear (TIRE WEAR), and tire repair (TIRE REPAIR) located in Table 2-2.

b. Ownership Costs consist of two cost elements: depreciation (DEPR) and facilities capital cost of money (FCCM) located in Table 2-1 and Table 2-2.

3-3. Basis for Equipment Rate Adjustment Tables. TABLES 3-1, Equipment Rate Adjustments for Ownership Costs, and TABLE 3-2, Equipment Rate Adjustments for Standby Costs, have been developed to adjust TABLE 2-1 hourly rates.

3-4. Determination for use of Equipment Rates in Table 2-1. There are two methods to obtain an hourly equipment rate. The first method is to use the rates in Table 2-1 and Table 2-2, and modify them as described in this chapter. The second method is to use the step-by-step rate computation shown in Figure 2-1. The equipment rates shown in Table 2-1 and Table 2-2 may be used instead of a step-by-step rate computation when both of the following conditions are met.

a. Cost or pricing data is not available.

b. The contractor's actual unit of equipment is equivalent in size, capacity, horsepower, and value to the unit of equipment listed in TABLE 2-1.

SECTION II. RATE ADJUSTMENTS

3-5. Rate Adjustments. The ownership and/or the operating portion of the hourly rates and standby hourly rates shall be adjusted whenever one or more of the following rate adjustment conditions exist. Rate adjustment conditions are explained below.

Changes in operating conditions… … … … … … … See Paragraph 3-6.
Changes in FCCM rate… … … … … … … … … … …See Paragraph 3-7.
Work shifts greater than 40 hours per week… … … ..See Paragraph 3-8.
Changes in FUEL cost… … … … … … … … … … See Paragraph 3-9.
Adjustments to FOG Cost… … … … … … … … … See Paragraph 3-10.
Equipment of different age than Table 2-1… … … … See Paragraph 3-11.
Rate adjustment for overage equipment… … … … ..See Paragraph 3-12.
Rate adjustment for overage equipment standby… .. See Paragraph 3-13.

There are no rate adjustments for APPENDIX B factors except for fuel cost and Cost of Money Rate (COM). Also, there are no rate adjustments for repairs, tire wear, or tire repair.

3-6. Changes in Operating Conditions. If difficult or severe conditions are justified by the Contracting Officer, selection or calculation of the appropriate rate is necessary. See Chapter 2, Section II, Operating Conditions for definition of average, difficult, or severe conditions, and determination of condition.

3-7. Change in Facilities Capital Cost of Money (FCCM) Rate. If the cost-of-money rate shown in Chapter 2, Section VII, Ownership Cost is not the current rate, the FCCM portion of the rate shall be adjusted upward or downward to match the cost-of-money rate for the period of equipment use. See APPENDIX I, Federal Cost-of-Money Rate, for a listing of cost-of-money rates. The Department of the Treasury adjusts the cost-of-money rate (Prompt Payment Interest Rate) on or about 1 January and 1 July each year; these revisions are printed in the Federal Register. Internet address for Prompt Payment Interest Rate is http://www.fms.treas.gov/prompt.html.

$$\text{Hourly Rate} = \text{DEPR/hr} + \left[(\text{FCCM/ hr}) \times \left(\frac{\text{new COM}}{\text{(old COM)}}\right)\right] + \text{Operating Costs/hr}$$

Example: Assume that TABLE 2-1 includes a crane *(Category C80, Sub-Category 0.02)* with the below hourly costs. The FCCM rate has increased from 5.00% to 6.00% (increase of 20.00%). The total hourly rate for this piece of equipment can be determined as follows:

Assumptions for Cost of Money rate of 6.00% (Discounted Rate of 4.00%):

DEPR (Depreciation)	=	$30.00/hr
FCCM (Facilities Capital Cost of Money)	=	$10.00/hr
Operating Costs (FUEL, FOG, TIRE WEAR, TIRE REPAIR, & REPAIR)	=	$40.00/hr
		==========
Total hourly rate (40 hrs/week)	=	$80.00/hr

Adjustment Calculation for new Cost of Money rate of 6.00%:

$$\$30.00/hr + [(\$10.00/hr) \times \frac{6.00\ \%}{5.00\ \%}] + \$40.00/hr = \$82.00/hr$$

3-8. Actual Work Hours Exceed 40 Hours per Week. If the actual number of work hours per week is greater than 40 hours, an adjustment shall be made to the FCCM element of the ownership cost. FCCM is to be paid up to a maximum of 40 hours per week (7 calendar days). To calculate a multi-shift rate, prorate the 40-hour FCCM over the actual hours per week, as follows:

Work Shift (Exceeding 40 hrs/week)

$$\text{Hourly Rate} = \text{DEPR/hr} + [(\text{FCCM/ hr}) \times \frac{40\ \text{hrs/week}}{\text{(actual work hrs/week)}}] + \text{Operating Costs/hr}$$

Example: Assume that TABLE 2-1 includes a crane *(Category C80, Sub-Category 0.02)* with the below hourly costs. This crane worked 10 hours per day, 6 days per week (60 hours per week). The total hourly rate for this piece of equipment can be determined as follows:

Assumptions for 40 hrs/week:

DEPR (Depreciation)	=	$30.00/hr
FCCM (Facilities Capital Cost of Money)	=	$10.00/hr
Operating Costs (FUEL, FOG, TIRE WEAR, TIRE REPAIR, & REPAIR)	=	$40.00/hr
		==========
Total hourly rate (40 hrs/week)	=	$80.00/hr

Adjustment Calculation for 60 hrs/week:

$$\$30.00/hr + [(\$10.00/hr) \times \frac{40\ \text{hrs/week}}{\text{(60 hrs/week)}}] + \$40.00/hr = \$76.67/hr$$

3-9. Changes in Fuel Cost. Hourly fuel costs (including electricity) shall be adjusted in the event the average fuel prices at the jobsite vary by more than 10 percent above or below the price in APPENDIX B. The contractor shall be required to furnish copies of all fuel supply contracts and invoices to the government to support fuel cost adjustment. Request for upward adjustment in the rates will be considered only when fuel is supplied by recognized distributors of bulk quantities. For example, if fuel cost increased by 15 percent, then 15 percent of the hourly fuel cost shall be added to the total hourly rate. Mathematically this is the ratio of the new fuel cost divided by the fuel cost (Appendix B).

Hourly Rate = (DEPR/hr + FCCM/hr) + (FOG/hr + TIRE WEAR/hr + TIRE REPAIR/hr + REPAIR/hr) + [(new Fuel cost) x FUEL/hr]
(Fuel cost in Appendix B)

Example: Assume that TABLE 2-1 includes a crane *(Category C80, Sub-Category 0.02)* with the below hourly costs. The fuel cost of $1.03/gal from Appendix B has increased to $1.20/gal (increase of 16.5%). The total hourly rate is adjusted by adding 16.5% to the hourly FUEL cost element. The total hourly rate for this piece of equipment can be determined as follows:

Assumptions for fuel cost of $1.03/gal from Appendix B:

DEPR (Depreciation)	=	$30.00/hr
FCCM (Facilities Capital Cost of Money)	=	$10.00/hr
FOG + TIRE WEAR + TIRE REPAIR + REPAIR	=	$30.00/hr
FUEL	=	$10.00/hr
		==========
Total hourly rate	=	$80.00/hr

Adjustment Calculation for new FUEL rate of $1.20/gal:

($30.00/hr + $10.00/hr) + $30.00/hr + [($1.20/gal) / ($1.03/gal) x $10.00/hr] = $81.65/hr

3-10. Adjustments to FOG Cost. The hourly FOG allowance shall also be adjusted upward or downward at the same percentage as the fuel cost change using the methodology as shown in paragraph 3-8, Changes in Fuel Cost.

3-11. Equipment of different age than Table 2-1. When the age of the equipment is newer or older than the age of the equipment listed in TABLE 2-1, TABLE 3-1 factors may be used to adjust the hourly rate (See paragraph 3-4. for guidance), otherwise the step-by-step calculation method is necessary. The factors given in TABLE 2-1 are

multiplied by the hourly ownership costs shown in TABLE 3-1. The result is an ownership rate adjusted for the actual age of the equipment. Note: Age adjustment factors in TABLES 3-1 and 3-2 varies by region.

a. When the age of a unit of equipment is older than the age of the equipment listed in TABLE 2-1, and does not exceed the economic life, as shown in APPENDIX D, use the example below to adjust the hourly rate. Economic life is determined by dividing hours of LIFE (from APPENDIX D) by Working Hours Per Year (WHPY from APPENDIX B).

Example: Assume that TABLE 2-1 includes a crane *(Category C80, Sub-Category 0.02)* manufactured in 1996, and has a total hourly rate of $65.00 per hour and an ownership rate of $30.00 per hour. If an equivalent crane owned by a contractor was manufactured in 1992, the total hourly rate is determined as follows:

Table 2-1 rate and adjustment calculation:

Total hourly rate	= $65.00/hr
Ownership rate 1996 (Depreciation + FCCM)	=-($30.00)/hr
Ownership rate 1992 adjusted for age	
(Ownership rate = $30.00) x (age adjustment factor = .90)	=+ $27.00/hr
	==========
Total hourly rate for equipment manufactured in 1992	= $62.00/hr

Note: The age adjustment factor of .90 is found in TABLE 3-1, for CAT C80, SUB 0.02, and for the year 1992.

b. When the unit of equipment is older than the age of equipment listed in TABLE 2-1 and exceeds the economic life as shown in APPENDIX D, use the example for overage equipment in Section 3-11.b shown below.

c. When the age of the unit of equipment is younger than the life in years shown in Table 3-1, use the latest age adjustment factor listed and follow the above adjustment example. The step-by-step calculation method shown in Figure 2-1, Equipment Rate Calculation Worksheet may also be used.

3-12. Rate Adjustment for Overage Equipment. If the contractor's equipment exceeds the economic life in hours, it is considered overage and the rates shall be adjusted (see Chapter 2, Section V, LIFE).

a. The base year for determining overage equipment value is the year corresponding to economic life. The total hourly operating rate for overage equipment

(no matter how old) shall be computed on the basis that the equipment is as old as possible "without" exceeding the hours of LIFE as shown in APPENDIX D. TABLE 3-1 and TABLE 3-2 show factors for the economic life for equipment based on the current pamphlet year (e.g. manufactured in 1996). If there is a comparable unit of equipment (horsepower, value, capacity, and size) shown in TABLE 2-1, the total hourly rate can be computed as shown in the following example.

b. If the equipment is overage, the ownership portion of the rate shall be adjusted. This adjusted rate is not to exceed the rate for the same unit of equipment that is not overage.

Example: Assume that TABLE 2-1 includes a crane *(Category C80, Sub-Category 0.02)* manufactured in 1996, and has a total hourly rate of $65.00 per hour and an ownership rate of $30.00 per hour. If an equivalent crane owned by a contractor was manufactured in 1974 (maximum life 1984), this crane is overage and the total hourly rate is determined as follows:

Table 2-1 rate and adjustment calculations:

Total hourly rate	= $65.00/hr
Ownership rate 1996 (Depreciation + FCCM)	=-($30.00)/hr
Ownership rate 1974 adjusted for age	
(Ownership rate = $30.00) x	
(Assume the oldest age adjustment factor = .63)	=+ $18.90/hr
	==========
Total hourly rate for equipment manufactured in 1974	= $53.90/hr

Note: The age adjustment factor of .63 is found in TABLE 3-1, for CAT C80, SUB 0.02, and for the last year shown.

3-13. Rate Adjustment for Overage Equipment Standby. If the equipment age is other than listed in TABLE 2-1 (1996), then adjustment to the hourly standby rate is required.

a. Standby rates are based on the "actual" age of the equipment, whether overage or not. The age adjustment factors given in TABLE 3-2 are multiplied by the hourly standby costs shown in TABLE 2-1 and result in a standby rate adjusted for the "actual" age of the unit of equipment being considered.

Example: Assume that TABLE 2-1 includes a crane *(Category C80, Sub-Category 0.02)* manufactured in 1996, and has a standby rate of $18.00 per hour. If an

equivalent crane owned by a contractor was manufactured in 1992, the hourly standby rate is determined as follows:

Table 2-1 rate:
Hourly Standby rate (per hour) = $18.00/hr

Adjustment Calculation:
Hourly Standby rate adjusted for actual age (per hour)
(Hourly Standby rate = $18.00/hr) x (Age adjustment factor = .90) = $16.20/hr

Note: The age adjustment factor of .90 is found in TABLE 3-2, for CAT C80, SUB 0.02, and for 1992 (actual year of manufacture).

b. When the equipment age is older than the last year shown in TABLE 3-2, the standby rate must be calculated using the step-by-step methodology shown in Figure 3-2, Standby Hourly Rate Calculation for Overage Equipment.

3-14. Adjustments to Rates for Equipment Not Listed in TABLE 2-1. When a unit of equipment is not listed in TABLE 2-1, the hourly rate may be determined by using the hourly rate listed for a similar unit of equipment or by proportioning a rate listed so that horsepower, value, capacity, and size are properly considered. When an hourly rate cannot be determined using TABLE 2-1, rates will be calculated following the methodology outlined in Chapter 2 and the adjustments explained in this chapter.

3-15. Equipment Purchased Used. A detailed methodology for computing a total hourly rate for equipment purchased used is not included in this pamphlet.

a. When actual cost data in accordance with Chapter 1 is not available, an hourly rate and standby rate for equipment purchased used can be computed on the basis that the equipment was purchased new by the contractor in the year it was manufactured. Consideration for the actual age of used equipment may require an adjustment for overage.

b. The condition of the used equipment at the time of purchase should consider the extent of capital improvements, mechanical condition, and previous hours of operation. These conditions are difficult or impossible to determine and evaluate when computing a total hourly rate based on actual acquisition cost.

3-16. Rate Calculation Example. Figure 3-1, Total Hourly Rate Calculation for Overage Equipment, illustrates how total hourly rates are adjusted for overage equipment.

Figure 3-2, Standby Rate Calculation for Overage Equipment, gives a sample calculation for computing adjusted standby rates.

TABLE 3-1

EQUIPMENT AGE ADJUSTMENT FACTORS

FOR

OWNERSHIP COSTS

THE "Equipment Age Adjustment Factors for Ownership Costs" in TABLE 3-1 are used when the age of a unit of equipment is other than the age of the equipment listed in TABLE 2-1.

The factors given in TABLE 3-1 are multiplied by the hourly ownership costs when shown in TABLE 2-1 and result in an ownership rate adjusted for the actual age of the equipment being considered.

When the "life" of the unit of equipment has exceeded the economic life given in APPENDIX D, the age will be determined as discussed in Chapter 3, Adjusments to Hourly Rates

Refer to Chapter 3, as follows:

3-11. Equipment of different age than Table 2-1.

3-12. Rate Adjustment for Overage Equipment.

TOTAL HOURLY RATE CALCULATION FOR OVERAGE EQUIPMENT

EXAMPLE

Assume the following set of given information for the rate calculation example:

A. The unit of equipment is not listed in TABLE 2-1

B. The equipment is contractor-owned

C. Data for the unit in question:

1. Clark front-end wheel loader
2. Model 125C, 4WD, 4 CY capacity
3. Serial number indicates year of manufacture = 1982
4. Actual purchase price in 1982 = $168,000
5. Horsepower is 203 hp
6. Drive tire size = 23.50 x 25, 16 Ply, L-3

Drive tire cost (1999) = 4 tires x $1,711 = $6,844

D. TABLE 3-1, Age Adjustment Factors for Ownership Costs:

1. Category L40 Sub Category 0.11 (wheel loaders < 225 hp)
2. The year corresponding to the last age adjustment factor = 1990

E. Adjust the actual purchase price:

1. Economic Indexes from APPENDIX E (wheel loaders EK = 45)

a. For 1990 (first year of economic life) the economic index = 4532

b. For 1982 (year of manufacture) the economic index = 3788

2. Purchase price (TEV) indexed to 1990 (first year of economic life):
(Purchase price includes discount, sales tax & freight)

(4532/ 3788) x $168,000 = $200,997 (=1990 purchase price)

F. Hourly rate is computed as follows in accordance with Figure 2-1, Equipment Rate Computation Worksheet

Figure 3-1. Total Hourly Rate Calculation for Overage Equipment

Use this worksheet to compute rates for equipment that is not in this pamphlet.

1. EQUIPMENT INFORMATION & EXPENSE FACTORS

TABLE 3-2

EQUIPMENT AGE ADJUSTMENT FACTORS

FOR

STANDBY COSTS

THE "Age Adjustment Factors for Standby Costs" in TABLE 3-2 are used when the age of a unit of equipment is other than the age of the unit of equipment listed in TABLE 2-1.

The factors given in TABLE 3-2 are multiplied by the hourly standby costs shown in TABLE 2-1 and result in an standby rate adjusted for the actual age of the equipment being considered.

When the "life" of the unit of equipment has exceeded the economic service life given in APPENDIX D, the age will be determined as discussed in Chapter 3, Adjusments to Hourly Rates

Refer to Chapter 3, as follows:

3-13. Rate Adjustments Overage Equipment Standby

STANDBY HOURLY RATE CALCULATION FOR OVERAGE EQUIPMENT

EXAMPLE

Assume the following information for the rate calculation example:

A. The unit of equipment is not listed in TABLE 2-1

B. The equipment is contractor-owned

C. Data for the unit in question:

1. Clark front-end wheel loader
2. Model 125C, 4WD, 4 CY capacity
3. Serial number indicates year of manufacture = 1982
4. Actual purchase price in 1982 = $168,000
5. Horsepower is 203 hp
6. Drive tire size = 23.50 x 25, 16 Ply, L-3

Drive tire cost (1999) = 4 tires x $1,711 = $6,844

D. Use the actual cost data as follows:

1. Purchase price (TEV) = $168,000
2. Year of manufacture = 1982

E. Hourly rate is computed as follows in accordance with Figure 3-2, Standby Hourly Rate Calculation for Overage Equipment.

Figure 3-2. Standby Hourly Rate Calculation for Overage Equipment

Use this worksheet to compute rates for equipment that is not in this pamphlet.

CHAPTER 4

METHODOLOGY FOR DREDGING PLANT

SECTION I. GENERAL

4-1. Contents. This chapter contains the methodology used to compute ownership and operating rates for dredging plant. Dredging plant is defined as marine equipment that is used for dredging operations for the majority of its plant life. See Table 2-1 for marine equipment where over the life of the equipment the plant is not typically used on a dredging project.

4-2. General. The ownership and operating rates provided in TABLE 2-1, Category M-10, are developed based on the methodology in Chapter 2 for non-dredging equipment. Those rates may be used for dredging, provided they are adjusted in accordance with the methodology provided in this chapter.

a. Ownership and operating cost factors as shown in TABLE 4-1, Dredge Plant Expense Factors, are for various types of dredging equipment and plant. When a type of equipment or plant is not listed, the cost factors may be estimated by using the factors listed in this table for a similar type of plant.

b. This rate methodology applies only to dredges and floating attendant plant engaged in any type of dredging operations.

c. Hopper dredge cost factors and operating cost rate methodology are not included in this chapter. These factors have been omitted primarily due to the limited number of hopper dredges and the complexity of the methodology used to calculate rates. Further information can be found in ER 1110-2-1302, Civil Works Cost Engineering and can be found on the Internet at http://www.usace.army.mil/inet/usace-docs/eng-regs/er1110-2-1302/toc.htm. Methodology for determining ownership cost (depreciation and FCCM) is determined using the methodology found "SECTION V. OWNERSHIPCOST" of this chapter.

d. For mechanical dredges, the cost of the buckets are typically included in the plant value, therefore no additional allowance should be made for ownership cost. If the bucket cost is not included in the plant value, then the bucket may be treated as a separate unit of equipment and calculated using from TABLE 2-1.

SECTION II. ANNUAL USE

4-3. Time Available to Dredge.

a. The number of months available per each calendar year for the contract dredging shall be based on the work time available to dredge, excluding downtime for major

repairs, work in dry dock, bad weather, and environmental restrictions. Therefore, Figure 4-1, Months Available by Region depicts months available for dredging, including mobilization and demobilization, based on data collected from Corps of Engineers' regional dredge estimating teams. This information shall be used for computing the ownership costs. If the contract document specifies a different time in months, these months may be substituted.

b. The basis for estimating operating hours of use per month must be documented in the estimate by the cost engineer.

Great Lakes, Upper Mississippi and Tributaries	**8**	**8**	**8**
West Coast and Tributaries	**9**	**9**	**9**

Figure 4-1. - Months Available by Region

SECTION III. LIFE

4-4. Life. The life for determining ownership and operating costs is defined as follows:

a. Useful Life. The Useful Life is expressed in years in TABLE 4-1. It is the expected life used to develop ownership rates for various types of dredge plant.

b. Physical Life. The Physical Life is expressed in hours in TABLE 4-1. It is the expected life used to develop operating rates for various types of dredge plant.

4-5. Annual Hours Available. The annual hours available to dredge can be established for each type of plant based on the months available and the estimated

effective monthly hours worked. For definition of effective time refer to ER 1110-2-1302, Civil Works Cost Engineering. The total annual hours available can be expressed by formula, as follows:

Available Hours Per Year = Months Available/Year x Effective Hours/Month

SECTION IV. SALVAGE VALUE

4-6. Salvage Value. The salvage value (SLV), expressed as a decimal, is shown in TABLE 4-1 for different types of plant.

SECTION V. OWNERSHIP COST

4-7. Ownership Cost. Ownership expense is expressed as a percent of plant value, which is defined as the acquisition cost plus any initial capital improvements. The value of initial capital improvements is based on those betterments, which were made within one year of purchase. Capital improvements do not include any replacement or repair work. Cost for repairs or replacements are covered in the repair cost allowance, within operating cost. Capital Improvements are considered betterment's, where the plant has been improved, such as adding radar, or upgrade of engines (Note: Only the cost difference between replacement of existing similar engines and actual cost for upgrade of engines should be considered as capital improvement). For capital improvements not made within the first year after the initial acquisition, see Section VIII, Negotiated Procurement. Ownership is based on "Dredging time" defined as effective plus non-effective time. "Effective working time" is defined as time during the dredging operation when actual production is taking place. "Non-Effective working time" is defined as time during the dredging operation when the dredge is operational but no production is taking place. For complete definition of terms see ER 1110-2-1302 Civil Works cost Engineering regulation or EI 01 D010 Construction Cost Estimates.

a. The ownership rate is determined from the plant value and is the total expense rate for depreciation and FCCM. When cost or pricing data is available, the actual acquisition price shall be used. Otherwise, the value of a similar piece of plant is used and, if necessary, adjusted so that capacity, size, and horsepower are properly considered.

b. Ownership expense is determined on a yearly basis, distributed over a monthly basis. The monthly rate is calculated based on the available use months, by using the following formula:

Ownership Per Month = Plant Value x (DEPR + FCCM) / Available use months

Where:

(1) DEPR = Ownership percent per year for depreciation

(2) FCCM = Ownership percent per year for Facilities Capital Cost of Money

4-8. Depreciation. Depreciation is computed using the straight-line method. The depreciable value is the acquisition cost, plus initial capital improvements, less estimated salvage. The basis for determining the yearly percentage factor for depreciation is expressed by formula, as follows:

$$\text{DEPR (percent per year)} = (1\text{-SLV}) / N$$

Where:

(1) N = Ownership Life in Years

(2) SLV = Salvage Value

4-9. Facilities Capital Cost of Money (FCCM). FCCM is computed as shown in Chapter 2, except that FCCM is determined on a yearly basis instead of an hourly basis and is expressed here as an annual percentage factor. The cost-of-money rate (CMR) in effect at the time the work is performed or current rate shall apply. This formula is expressed as follows:

$$\text{FCCM (percent per year)} = \frac{[(N-1)(1+SLV)+2](CMR)}{2N}$$

Where:

CMR = Cost-of-money rate reduced by 25.0% for overhead and profit allowance

4-10. Other Ownership Elements. Taxes, storage (lay-up), and insurance are considered indirect (overhead) costs as defined in ER 1110-2-1302, Appendix D. These are not included in ownership rates as calculated in this chapter since they vary by geographic areas and with individual contractors. These costs should not be duplicated in the overhead in the estimate or submitted proposal.

SECTION VI. OPERATING FACTORS

4-11. Hourly Operating Cost. Ownership is based on effective time. Dredge plant operating factors are shown in TABLE 4-1. These factors, which are described below, are not intended to replace historical data but may be used when historical data is limited or non-existent.

4-12. Prime and Secondary Power. Prime power refers to the primary operating engine for the dredge or other piece of attendant plant. Secondary power refers to all other secondary engines or power plants. If more than one of these engines is present, the horsepower is totaled. Fuel consumption factors are prepared on the same basis as Chapter 2. If the estimator has more specific fuel consumption information, the horsepower factor (HPF) may be adjusted to reflect job conditions. The HPF factor is shown for information only in non-decimal format.

4-13. Water, Lube, and Supplies (WLS). This factor is similar to the FOG factor described in Chapter 2. This item is computed as either a percentage of the hourly fuel costs or, if the type of plant has no engine, a reasonable hourly cost should be included. This factor does not include an allowance for the oiler normally assigned to the dredge or other piece of dredge plant.

4-14. Repairs (RPR). This factor includes an allowance for all major and minor repairs and is similar to the maintenance and repair cost factor described in Chapter 2. The economic adjustment factor (EAF) and the labor adjustment factor (LAF) are required to develop this cost. It should be noted that the repair allowance does not include the following estimated additive items:

a. Excessive dredge wear for parts such as cutter teeth and main suction pumps are not included due to the wide variety of materials being dredged. The original cost of the bucket and normal wear are typically included in the plant value covered in the plant rate. Excessive bucket wear for mechanical dredges is estimated as an additive item or treated as a separate unit of equipment from TABLE 2-1. Allowances for wear due to abrasive material should only be included as an additive item if it is warranted and is not considered elsewhere in the estimate.

b. Dry docking costs, which represent an allowance for rental of the dry dock facility, are not included because they vary greatly depending on the facilities available. Repairs incurred while in dry dock, which occur periodically, are in the repair factor (RPR). Dry docking costs will be allocated on an average annual basis over the years between such occurrences (in accordance with FAR 31.205-24).

c. There is no predetermined allowance in the dredge plant methodology for jobsite yard costs, mobilization, or demobilization. All of these cost elements must be separately estimated to match each project's construction conditions.

SECTION VII. STANDBY

4-15. Standby Rate. The standby rate is computed by allowing the full ownership cost (full depreciation plus the full FCCM). In addition to the standby ownership rate, it may be necessary on dredges to include operating costs. A generator fuel allowance to account for operation of a diesel engine generator for power to operate pumps, navigation lights, minimum crew, etc. are examples of these operating costs.

a. Standby is directed delay by the Government and will not be allowed during periods when the plant would have otherwise been in idle status, such as non- effective working time. Since ownership is calculated based on life in years computed monthly, standby should be paid only when additional time has been directed by the government. Standby is to be paid on a 24-hour basis.

b. Standby for pipeline and accessories shall be based on pumping mud in determining values from TABLE 4-1.

SECTION VIII. NEGOTIATED PROCUREMENT

4-16. Rates. The calculated plant rates based on the methodology presented in this chapter should be used for preparing a reasonable contract estimate. When adequate cost or pricing data is available and is submitted by the contractor for negotiated procurement, the rates may be adjusted in accordance with the methodology in this chapter. Cost or pricing data is defined in Federal Acquisition Regulation (FAR), Subpart 15, Contracting by Negotiation (15.401, Definitions).

4-17. Allowance for Additional Capital Improvements. Allowance for additional capital improvements shall be calculated in accordance with accepted general accounting principles. When adequate cost or pricing data is not available, factors for a similar unit of equipment may be used for determining the ownership rate for overage equipment and plant.

4-18. Overage Plant

a. When the plant has exceeded the useful life given in TABLE 4-1, it is considered overage. The ownership rate for overage plant should be determined with the same methodology described in SECTION V with useful life as shown in TABLE 4-1.

b. When actual cost or pricing data is available to adjust the operating rate, the data must be adequate and established in accordance with accepted general accounting principles. When actual cost or pricing data is not available, the total hourly operating rate for overage equipment shall be computed on the basis that the equipment is equal to the Useful Life as shown in TABLE 4-1.

4-19. Dredge Plant Purchased Used. For plant purchased used, the ownership and operating rate must be calculated on an individual case, due to the varying conditions. When actual cost or pricing data is not available, the methodology from this chapter shall be used and values for life and salvage from TABLE 4-1 can be adjusted. Support for adjustments can be obtained by calling the Chief, Cost Engineering Branch, CENWW-ED-C, Corps of Engineers, Walla Walla District, telephone (509) 527-7511.

SECTION IX. RATE CALCULATION EXAMPLE

4-20. Rate Calculation Example. The example shown in Figure 4-2, Dredge Plant Ownership and Operating Worksheet illustrates the use of FIGURE 4-1, TABLE 4-1 and the regional data from APPENDIX B to generate a rate.

a. Ownership is determined by calculating yearly percentages to account for Depreciation and FCCM. Operating costs are determined by using formulas from Chapter 2 for FUEL, FOG (WLS), and REPAIRS.

b. For illustration purposes, assume that a 24" hydraulic dredge was purchased new in 1987 for $3,700,000, including tax and delivery, and there were no initial capital improvements. This example uses 500 hours per month and a discounted cost-of-money rate (CMR) of 4.00%.

f. RPR (Repair Cost Factor)..... > 130 % = 1.30

SHEET 2 of 5

FIGURE 4-2 - DREDGE PLANT OWNERSHIP AND OPERATING RATE WORKSHEET (continued)

6. Ownership Expense Percent per Year

a. Depreciation Percent (%): = (1.0 - SLV) / N

(1.0 - 0.10) / 25.00 = 3.60%

b. FCCM Percent (%): = [(N-1)(1+SLV) + 2] x Discounted Money Rate / 2N

[(25.00 - 1)(1 + 0.10) + 2] x 4.000% / (2 x 25.00) = 2.27%

c. Total Ownership Percent Per Year....(3.60% + 2.27%) = 5.87%

7. OWNERSHIP COSTS:

a. Yearly Ownership Expense: = (Total Plant Value x Total Yearly Ownership %)

($3,700,000 x 5.87%) = $217,190 /year

b. Monthly Ownership Expense: = (Yearly Ownership Expense /Months Available per year)

($217,190 /yr / 9 mos/yr) = $24,132 /month

8. OPERATING COSTS:

a. Fuel Cost = (Engine Fuel Factor x HP x Fuel Cost/Gal)

(1) Prime Engine Fuel:

(0.045 x 3,730 HP x $1.00 /gal) = $167.85 /hour

(2) Secondary Engine Fuel:

(0.039 x 2,475 HP x $1.00 /gal) = $96.53 /hour

b. Water, Lube & Supply Cost = (WLS factor x Hourly Fuel Cost)

(1) Prime Engine WLS:

(0.22 x $167.85) = $36.93 /hour

(2) Secondary Engine WLS:

(0.22 x $96.53) = $21.24 /hour

SHEET 3 OF 5

FIGURE 4-2 - DREDGE PLANT OWNERSHIP AND OPERATING RATE WORKSHEET (continued)

8. OPERATING COSTS (Continued):

c. Repair Cost:

(1) EAF (Economic Adjustment Factor)

= (Economic Index for Present Year / Economic Index for Acquisition Year)

(5710 <for 1999> / 3886 <for 1987>) = 1.469

(2) Repair Cost:

= (Total Plant Value x RPR x EAF x LAF) / Life in hrs

($3,700,000 x 1.30 x 1.469 x 1.240) / 130,000 hrs = $67.40 /hour

d. Total Hourly Operating Cost = (Fuel + WLS + Repairs)

($167.85 + $96.53 + $36.93 + $21.24 + $67.40) = $389.95 /hour

e. Monthly Operating Cost: = (Total Hourly Operating Cost x Hours Worked per Month)

($389.95 /hour x 500 hours/month) = $194,975 /month

9. SUBTOTAL MONTHLY EXPENSE = (OWNERSHIP + OPERATING)

($24,132 /month + $194,975 /month) = $219,107 /month

10. ESTIMATED ADDITIVE ITEMS (Sheet 1, Item k.):

a.	(1) Excessive Dredge Wear (Gravel)	$8,000	/month
	(2)		/month
	(3)		/month
	(4)		/month
	(5)		/month
b.	Subtotal - Estimated Additive Items	$8,000	/month

11. TOTAL MONTHLY RATE (Items 9 + 10 b.) $227,107 /month

See following sheet for standby allowance.

SHEET 4 OF 5

FIGURE 4-2 - DREDGE PLANT OWNERSHIP AND OPERATING RATE WORKSHEET (continued)

12. STANDBY ALLOWANCE

a. Yearly Standby Expense:

= Ownerhip Cost from 7. a.

$217,190 /year

b. Monthly Standby Expense:

= Ownerhip Cost from 7. b.

$24,132 /month

c. STANDARD HOURLY STANDBY EXPENSE:

= (Monthly Standby Expense / 730 hr/mo)

($24,132 /month / 730 hours/month) = $33.06 /hour

An additional generator fuel allowance may be allowed under certain circumstances. This allowance is applicable to dredges only.

d. Generator Fuel Allowance for a Dredge:

= ((Generator HP / Total Secondary HP) x Secondary Fuel Cost)

((200 HP / 2,475 HP) x $96.53) = + $7.80 /hour

e. TOTAL HOURLY STANDBY ALLOWANCE FOR A DREDGE:

= (Standby Allowance + Generator Fuel Allowance)

($33.06 + $7.80) = $40.86 /hour

CONTRACT COST PRINCIPLE AND PROCEDURES
EAC 95-6

SUBPART 31.1 -- APPLICABILITY

31.105 Construction and Architect-Engineer Contracts.

(d)(2)(i)(b) In this case, equipment ownership and operating costs shall be determined using the Construction Equipment Ownership and Operating Expense Schedule published by the U.S. Army Corps of Engineers.

31.105-100 Contract clause.

The contracting officer shall insert the statement at 52.231-5000 in all solicitations and contracts for construction within the United States that are expected to exceed the small purchase threshold.

EFARS Clause - 52.231-5000 Equipment ownership and operating expense schedule.

As prescribed in 31.105.100, insert the following clause in all solicitations and contracts for construction that are expected to exceed the small purchase threshold.

EQUIPMENT OWNERSHIP AND OPERATING EXPENSE SCHEDULE (MAR 1995) -EFARS

(a) This clause does not apply to terminations. See 52.249-5000, Basis for settlement of proposals and FAR Part 49.

(b) Allowable cost for construction and marine plant and equipment in sound workable condition owned or controlled and furnished by a contractor or subcontractor at any tier shall be based on actual cost data for each piece of equipment or groups of similar serial and series for which the Government can determine both ownership and operating costs from the contractor's accounting records. When both ownership and operating costs cannot be determined for any piece of equipment or groups of similar serial or series equipment from the contractor's accounting records, costs for that equipment shall be based upon the applicable provisions of EP 1110-1-8, Construction Equipment Ownership and Operating Expense Schedule, Region *[insert Roman numeral for the appropriate region of the schedule]*. Working conditions shall be considered to be average for determining equipment rates using the schedule unless specified work was performed shall apply.

SECTION III: EFAR REFERENCE (Continued)

otherwise by the contracting officer. For equipment not included in the schedule, rates for comparable pieces of equipment may be used or a rate may be developed using the formula provided in the schedule. For forward pricing, the schedule in effect at the time of negotiations shall apply. For retroactive pricing, the schedule in effect at the time the

(c) Equipment rental costs are allowable, subject to the provisions of FAR 31.105(d)(ii) and FAR 31.205-36. Rates for equipment rented from an organization under common control, lease-purchase arrangements, and sale-leaseback arrangements, will be determined using the schedule, except that actual rates will be used for equipment leased from an organization under common control that has an established practice of leasing the same or similar equipment or unaffiliated lessees.

(d) When actual equipment costs are proposed and the total amount of the pricing action exceeds the small purchase threshold, the contracting officer shall request the contractor to submit either certified cost or pricing data, or partial/limited data, as appropriate. The data shall be submitted on Standard Form 1411, Contract Pricing Proposal Cover Sheet.

APPENDIX C
GUIDE FOR SELECTING OPERATING CONDITIONS

EQUIPMENT TYPE	AVERAGE	SEVERE
B25 & B35: Buckets Clamshell or Dragline Depreciation Period :	Working in gravels, silts, and sands at low impact fresh water environment. 8,000 - 10,000 hours	Working in rock, hard digging, high impact or salt water environment. 6,500 - 8,000 hours
C80, C90: Cranes Hydraulic, Truck Mounted Mechanical, Truck Mounted Depreciation Period:	Lift less than rated capacity, intermittent duty. 14,000 - 20,000 hours	Continuous lift near rated capacity, excessive swing, abrasive materials, sloped surfaces, salt water environment. 12,000 - 18,000 hours
C85: Cranes, Mechanical Dragline, Lifting, or Clamshell Crawler Mounted Depreciation Period :	Gravels, silts, pull and lift less than rated capacity. 12,000 - 20,000 hours	Highly abrasive materials, impact breakout, continuous load near rated capacity. Salt water environment. 10,000 - 18,000 hours
G10: Generators Depreciation Period:	Working below rated capacity, good field conditions. 8,000 - 10,000 hours	Working at or above rated capacity, poor field conditions, such as salt water. 7,000 - 8,000 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
G15: Graders, Motor	Haul road maintenance. Road construction, ditching. Loose fill spreading. Landforming, landleveling. Summer road maintenance with medium to heavy winter snow removal. Elevating grader use.	Maintenance of hard packed roads with embedded rock. Heavy fill spreading. Ripping-scarifying of asphalt or concrete. Continuous high load factor. High impact.
Depreciation Period:	14,000 hours	12,000 hours
H25: Hydraulic Excavators Crawler Mounted	Clay, earth digging, no breakout impact, easy continuous or intermittent duty. Mass excavation or trenching where machine digs all the time in natural bed clay soils. Some traveling and steady, full throttle operation. Most log loading applications.	Rock work, pull near rated capacity, uneven surface, impact breakout, abrasive materials. Continuous trenching or truck loading in rock or shot rock soils. Large amount of travel over rough ground. Machine continuously working on rock floor with constant high load factor and high impact. Salt water environment.
Depreciation Period:	10,000 - 18,000 hours	8,000 - 15,000 hours
H30: Hydraulic Excavators Wheel Mounted	Continuous digging in sandy clay/sandy gravel, site development, and lumber yard applications.	Continuous digging in rock/natural bed clay, high impact, using hammer, working in forests or quarries.
Depreciation Period:	8,000 - 10,000 hours	6,500 - 8,000 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
H35: Hydraulic Shovels Crawler Mounted (nonelectric)	Gravels, silts, well broken rock, lift less than rated capacity. Continuous loading in well-shot rock or fairly tight bank. Good underfoot conditions; dry floor, little impact or sliding on undercarriage.	Extremely abrasive tough materials, lifting near rated capacity, impact breakout. Continuous loading in poorly-shot rock, lightly blasted tight banks, e.g. shales, caliches, cemented gravels, etc. Adverse underfoot conditions: rough floors, high impact sliding on undercarriage. Salt water environment.
Depreciation Period:	14,000 - 18,000 hours	12,000 - 16,000 hours
L10: Land Clearing Equipment	Working in low impact conditions at or below rated capacity.	High impact conditions working at or above rated capacity.
Depreciation Period:	10,000 hours	7,000 hours
L30: Loaders, Belt	Working below rated capacity, with intermittent service.	Working at or above rated capacity with continuous service.
Depreciation Period:	10,000 hours	8,000 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
L35: Loaders, Front End Crawler Type	Bank excavation, intermittent ripping, basement digging of natural bed clays, sands, silts, gravels. Some traveling. Steady full throttle operations.	Loading shot rock, cobbles. High density materials in standard bucket. Continuous work on rock surfaces. Large amount of ripping of tight rock materials. High impact conditions. Salt water environment.
Depreciation Period:	8,000 - 10,000 hours	6,000 - 8,000 hours
L40: Loaders, Front End Wheel Type (does not include skid steer & tool carriers)	Continuous truck loading from stockpile. Low to medium density materials in properly sized bucket. Hopper charging in low to medium rolling resistance. Loading from bank in good digging. Load and carry on poor surfaces and slight adverse grades.	Loading shot rock (large loaders). Handling high density materials with counterweighted machine. Steady loading from very tight banks. Continuous work on rough or very soft surfaces. Load and carry in hard digging; travel longer distances on poor surfaces with adverse grades. Salt water environment.
Depreciation Period :	10,000 - 13,000 hours	8,000 - 10,000 hours
L45 & L50: Loaders with Backhoe Crawler Type and Wheel Type	Utility applications in medium to heavy soil. Occassional use of constant flow implements. Dig depths to 3.05m (10 ft.).	Production applications or digging in rock. Regular use of constant flow implements. Dig depths over 3.05m (10 ft.).
Depreciation Period:	10,000 hours	6,000 - 8,000 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
L60: Log Skidders	Continuous turning, steady skidding for medium distances with moderate decking. Good underfooting: dry floor with few stumps and gradual rolling terrain.	Continuous turning, steady skidding for long distances with frequent decking. Poor underfoot conditions: wet floor, steep slopes, and numerous stumps. Salt water environment.
Depreciation Period:	8,000 hours	7,000 hours
M10 - .31 & .32 : Clamshell dredges < 5 cy Amphibious Excavator	Gravels, silts, breakout force at less than capacity, fresh water conditions.	Rock, abrasive materials, load at rated capacity, salt water conditions.
Depreciation Period:	12,000 - 20,000 hours	10,000 - 18,000 hours
M10 - .51, .52, & .53 : Boats, Skiffs, Crew Boats, Work Boats, Survey Boats & Launches	Fresh water applications, light waves, steady to light use.	Salt water use, medium to high waves, heavy use.
Depreciation Period :	12,000 - 14,000 hours	10,000 - 12,000 hours
P35: Pipelayers	Typical pipelayer use in operating conditions ranging from very good to severe.	Continuous use in deep mud or water or on rock surfaces.
Depreciation Period :	15,000 hours	10,000 hours
R10: Rippers and Bank Slopers	Light rock medium breakout force required.	Hard rock, excessive wear due to high breakout force.
Depreciation Period :	8,000 hours	6,500 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
S10, S15, S20, & S25: Scrapers Self-Propelled Tractor Drawn Soil Stabilizers	Varying loading and haul road conditions. Long and short hauls.Adverse and favorable grades. Some impact. Typical road-building use on a variety of jobs.	High impact conditions, such as loading ripped rock. Continuous high total resistance conditions. Rough haul roads. Overloading.
Depreciation Period :	10,000 - 17,000 hours	8,000 - 12,000 hours
T15: Tractors Crawler (Dozer)	Production dozing in clays, sands, gravels, and talus rock. Push-loading scrapers, borrow pit ripping, most land clearing and skidding applications. Medium impact conditions. Production landfill work.	Heavy rock ripping. Tandem ripping. Pushloading and dozing in hard rock. Work on rock surfaces. Continuous high impact conditions. Salt water environment.
Depreciation Period :	10,000 - 22,000 hours	8,000 - 15,000 hours
T20: Tractors Wheel Type (Dozer)	Production dozing, push-loading in clays, sands, silts, loose gravels. Shovel cleanup.	Production dozing in rock. Push loading in rocky, boulder-strewn borrow pits. High impact conditions. Landfill compactor work.
Depreciation Period :	12,000 hours	8,000 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
T30: Trenchers Chain & Wheel Type Depreciation Period :	Working in sands and silts below rated capacity of the machine. 8,000 - 10,000 hours	Working in gravels and abrasive materials at or above the rated capacity of the machine. 6,500 - 8,000 hours
T45 & T50: Truck Trailers Trucks, Highway Depreciation Period :	Varying loading and road conditions. Typical construction use on a variety of jobs. 7,000 - 10,000 hours	Consistently poor road conditions. Oversized loading equipment. 5,500 - 7,000 hours
T55 & T60: Trucks, Off-Highway Trucks, Water, Off-Highway Depreciation Period:	Varying load and haul road conditions. High rolling resistance and poor traction during part of the job. Some adverse grades. Some impact loads. Typical use in road building, dam construction, open-pit mining, etc. 12,000 - 25,000 hours	Continuous use on very poorly maintained haul roads, high rolling resistance and poor traction. Frequent adverse grades and high impact loads. Poorly attached loading equipment with continuous overloading. 10,000 - 20,000 hours

GUIDE FOR SELECTING OPERATING CONDITIONS		
EQUIPMENT TYPE	**AVERAGE**	**SEVERE**
T65 - .20 & .40: Tunnel / Mining Equipment Tunnel Boring Machines Roadheaders Continuous Miners	Mining rock in average conditions, machine working below rated capacity.	Mining hard rock in severe working conditions, machine working at rated capacity.
Depreciation Period :	16,000 - 22,000 hours	14,000 - 20,000 hours
W10 & W15: Wagons Bottom Dump Rear Dump	Varying load and haul road conditions. Long and short hauls. High rolling resistance and poor traction during part of the job. Some adverse grades. Some impact. Typical road building use in a variety of jobs, dam construction, openpit mining, etc.	Continuous use on very poorly maintained haul roads, high rolling resistance and poor traction. High impact conditions, such as loading ripped rock. Frequent adverse grades and high impact loads. Poorly matched loading equipment with continuous overloading.
Depreciation Period :	12,000 hours	10,000 hours

APPENDIX G

TIRE LIFE AND TIRE WEAR FACTORS

SECTION I. TIRE WEAR FACTORS

The tire wear factors used in this pamphlet are listed in APPENDIX D. The "useful life" of a new tire is the product of Condition Factors (CF) from Group A through Group E multiplied by the Wheel Position Factor (WPF), and for drive tires only, the Grade Factor (GF). These factors provide a percentage reduction to the maximum tire life. Section II, Maximum Tire Life, states tire life in hours. See Chapter 2 for tire methodology.

Drive Tires: Useful Tire Life = (CF x WPF x GF)
All Other Tires: Useful Tire Life = (CF x WPF)

EXAMPLE *

* Condition Factors, Wheel Position Factors, and Grade Factor are from GMC Terex Guide.

Factors are specifically for a rear dump wagon.

Condition Factors (CF):		**Average**	**Severe**
A	Maintenance	1.00	1.00
B	Speeds	0.80	0.85
C	Curves	1.00	0.90
D	Surface Condition	0.90	0.70
E	Loads	0.90	0.80
CF	***Product of the factors (A x B x C x D x E)***	**0.65**	**0.43**

Wheel Position Factors (WPF):			
WPF-FT	Front Tire (FT)	0.90	0.90
WPF-DTR	Drive Tire (DT) - Rear Dump	0.70	0.70
WPF-TT	Trailing Tire (TT)	1.00	1.00

Grade Factor (GF):			
GF	Grade Factor (Drive Tires Only)	0.85	0.75

TIRE LIFE AND TIRE WEAR FACTORS

(continued next page)

SECTION I. TIRE WEAR FACTORS (continued)

EXAMPLE: FINAL TIRE WEAR FACTORS FOR WAGON, REAR DUMP
(See APPENDIX D, Category W15)

	Average	Severe
Front Tire - Average = (CF = .65)(WPF-FT = .90)	0.59	
Front Tire - Severe = (CF = .43)(WPF-FT = .90)		0.39
Drive Tire - Average = (CF = .65)(WPF-DTR = .70)(GF = .85)	0.39	
Drive Tire - Severe = (CF = .43)(WPF-DTR = .70)(GF = .75)		0.22
Trailing Tire - Average = (CF = .65) (WPF-TT = 1.00)	0.65	
Trailing Tire - Severe = (CF = .43) (WPF-TT = 1.00)		0.43

SECTION II. MAXIMUM TIRE LIFE

Maximum tire life is used in the formula to determine tire wear cost.

MAXIMUM TIRE LIFE	Hours
Bias Ply Tires - Off highway E4, L4, and L5	5,000
Bias Ply Tires - All other bias tires	5,000
Radial Ply Tires - Off highway RL4	5,000
Radial Ply Tires - All other radial tires	5,000
Conveyor Belts	5,000

EQUIPMENT ACCESSORIES

CAT . SUB	DESCRIPTION

The following accessories (including features required for safety) have been included with the major equipment listed in this pamphlet when they are not included with the basic cost and are offered by the manufacturer.

C85.10 CRANES, DRAGLINE & CLAMSHELL, CRAWLER MOUNTED

Power load lowering
Independent swing and travel
Third drum
Torque converter (machines 1-1/2 CY or larger)
Approximately one-half maximum boom length
Counterweight (standard)
Fire Extinguisher 5-B:C
Swing and Reverse Signal (Backup) Alarm
Boom angle indicator and a load indicating device
Drum rotation indicators
Anti-two block (upper limit) devices
Manufacturers mandatory accessories

C85.20 CRANES, LIFTING, CRAWLER MOUNTED

Power load lowering
Independent swing and travel
Third drum
Torque converter (machines 25 tons or larger)
One-half maximum boom length (machines less than 60 tons)
Maximum boom length at 360 degree rating (machines larger than 60 tons)
Counterweight (standard)
Fire Extinguisher 5-B:C
Swing and Reverse Signal (Backup) Alarm
Boom angle indicator and a load indicating device
Drum rotation indicators
Anti-two block (upper limit) devices
Manufacturers mandatory accessories
Hook block on machines larger than 100 tons

EQUIPMENT ACCESSORIES

CAT . SUB	DESCRIPTION
C90.01	TRUCK CRANES - LESS THAN 25 TONS
	Power load lowering Third drum Mechanical outriggers with screw jacks Maximum boom length at 360 degrees rateing Counterweight (standard) Fire Extinguisher 5-B:C Swing and Reverse Signal (Backup) Alarm Boom angle indicator and a load indicating device Drum rotation indicators Anti-two block (upper limit) devices Manufacturers mandatory accessories
C90.02 **C90.03** **C90.04**	TRUCK CRANE - 25 TONS & LARGER
	Power load lowering Third drum Hydraulic outriggers with screw jacks Torque converter when available (upper only) Maximum boom length at 360 degrees rating Counterweight (standard) Fire Extinguisher 5-B:C Reverse Signal (Backup) Alarm Boom angle indicator and a load indicating device Drum rotation indicators Anti-two block (upper limit) devices Hook block on machines larger than 100 tons
G15	GRADER
	Rollover Protective Structures (ROPS) with enclosed cab Ripper/Scarifier, rear mounted Front wheel lean Power circle Hydraulic shift and tilt moldboard End bits Standard work lights

EQUIPMENT ACCESSORIES

CAT . SUB	DESCRIPTION
G15	GRADER (continued)
	Fire Extinguisher 5-B:C
	Reverse Signal (Backup) Alarm
H25	EXCAVATORS, HYDRAULIC
H30	
	Backhoe bucket (standard)
	Backhoe stick (medium length)
	Backhoe boom (one piece)
	Backhoe bucket linkage (with cylinder)
	Guards
	Counterweight
	Standard work lights
	Reverse signal (Backup) alarm
	Rollover Protective Structures (ROPS)
	Fire Extinguisher 5-B:C
H35	HYDRAULIC SHOVELS - CRAWLER MOUNTED
	Torque converter (machines 1-1/2 CY or larger)
	Counterweight
	Reverse signal (Backup) alarm
	Rollover Protective Structures (ROPS)
	Fire Extinguisher 5-B:C
L30	LOADERS, BELT (CONVEYOR BELTS)
	Power unit
	Head pully clutch and backstop
	Belt cleaner and belt installing equipment
	King pin attachments

EQUIPMENT ACCESSORIES

CAT . SUB	DESCRIPTION
L35	LOADERS, 1-1/2 CY AND LARGER
L40	
	Blower fan
	Guard, power train
	Automatic bucket positioner
	Standard counterweight
	Machines less than 7 CY: General Purpose or Excavating bucket with bolt on cutting edge and no teeth
	Machines 7 CY or larger: Rock bucket with bolt on cutting edge and teeth
	Standard work lights
	Reverse signal (Backup) alarm
	Rollover Protective Structures (ROPS)
	Fire Extinguisher 5-B:C
S10	SCRAPERS
S15	
S20	Control single lever
	Blower fan
	Standard work light
	Guards, power train
	Reverse signal (Backup) alarm
	Rollover Protective Structures (ROPS)
	Fire Extinguisher 5-B:C
	Supplemental steering
T15	TRACTOR, CRAWLER
	Hydraulic controls for ripper and blade
	Guards
	Blower fan
	Standard work lights
	Hook, front pull
	Track grousers (severe service for units over 200 hp)
	Counterweights where required
	Reverse Signal (Backup) Alarm
	Rollover Protective Structures (ROPS)
	Univeral Blade

EQUIPMENT ACCESSORIES

CAT . SUB	DESCRIPTION
T20	TRACTOR, WHEEL
	Hydraulic controls for ripper and blade Guards Blower fan Standard work lights Blade Fire Extinguisher 5-B:C Counterweights when required
T25	TRACTOR, AGRICULTURAL
	Independent Power Take Off (PTO) Standard work lights Fire Extinguisher 5-B:C Counterweights when required 3-Point hitch Rollover Protective Structures (ROPS) Hydraulic system with controls
T55	TRUCKS, OFF-HIGHWAY
	No spin differential Tacograph Engine and transmision guards Body liners
