Federal Caucus Public Comment Form

All comments on the All-H Paper--written, e-mailed and oral-- will be analyzed and considered in a summary report, with responses at the time of the final All-H paper. The comment period closes March 17, 2000.

Please hand in comments at the open house written comment table or mail them to: Federal Caucus Comment Record; c/o BPA-PL, 707 W. Main St., Suite 500, Spokane, Wa. 99201

Please use this page to comment on issues related to the Federal Caucus All-H Paper. Please use the Corps EIS Public Comment Form and the Corps John Day Study Comment Form to make comments on those documents. You do not have to limit your comments to this page only - use as many pages as necessary!

The Federal Caucus welcomes comments on all and any aspects of the All-H Paper. Comments related to the following might be among those you consider:

- Scope of consideration
- Range of options in each H
- Adequacy of analyses presented
- Existing or additional analyses
- Adequacy of/ or additional alternatives
- Appropriateness of goals and objectives

I believe what shocks & saddens me the most is that we're to the point of discussing this as a considered option. I can't believe that the environmental zealots can destroy so many people's lives with such disregard. The goal of increased salmon numbers may be feasible, but not with this plan, & not without reduced or eliminated sport & commercial fishing. I feel there is very little hard scientific data that (over)

suggests this plan will have very little if any beneficial impact on the salmon. There is another group near extinction, and that is the American farmer. My father lived through the great Depression, and understands the importance of a dependable domestic food supply. Any action that threatens that, is too great a cost, to our states economy & the stability of our whole nation. The additional cost of power generation will impact everyone, not just the farm economy.

I believe this well-intentioned, but ill-conceived plan to breach the dams to save a few fish, comes at an extreme cost to our families, small business, industries & food suppliers, which our state and federal government are obligated to protect.
