

U.S. Army Corps of Engineers
BUILDING STRONG®

Exciting Careers *in...* *Civil Engineering*

The U.S. Army Corps of Engineers (USACE) is one of the world's premier public engineering, design and construction management agencies. USACE includes more than 37,000 dedicated civilians and over 550 soldiers who deliver timely and quality engineering, technical and construction management service to customers in more than 90 countries. We have a broad range of missions in support of the Department of Defense and the nation to include design and construction of military facilities, engineering research and development, water and natural resource management, and support to other government agencies. We provide the opportunity to work in major cities, small communities and at offices throughout the world.

Civil Engineers

USACE Civil Engineers plan, design, construct, and maintain the nation's water resources, Army installations, and numerous other Federal and local projects. Their mission areas extend around the globe whether nation-building or performing emergency reconstruction.

We want Civil Engineers to join our team to design and construct facilities to support our troops, including highways and airfields; repair major rehab of our nation's water resource infrastructure including locks, dams, levees and costal structures; restore environmentally sensitive areas; and find new energy solutions for our future.

Qualifications

Qualifications vary according to job position. You must have either a B.S. in civil engineering or an equivalent combination of education and experience for entry-level positions.

In addition to offering a challenging and rewarding work environment, we offer competitive salaries, training and outstanding benefits.
