

GREEN SHEET

Project Name: Water-Related Development Project, City of Driggs, Teton County, Idaho

Environmental Compliance File Number: PM-EC-2018-0004

Responsible Environmental Staff: Jarrett Schuster, Environmental Resource Specialist, 509-527-7256, Jarrett.L.Schuster@usace.army.mil.

Environmental Conditions or Mitigation Requirements: The table below lists all avoidance thresholds, mitigative requirements, stipulations, requisite best management practices, environmental commitments, permitting conditions, or monitoring identified as necessary to ensure the proposed action is implemented in compliance with the pertinent laws, regulations and Executive Orders reviewed. A record of completion of these items must be maintained in the Walla Walla District environmental compliance records.

Environmental Condition or Mitigation Requirement	Status & Date
Any potential impacts to wetlands, waters of the United States (Valley Centre/Teton Creek), or drainage ways that lead to the wetlands or waters of the United States will be mitigated via Best Management Practices (e.g. silt fence or straw wattles) to protect wetlands from sediment and storm water runoff.	
Staging areas will be located a minimum of 50 feet and, where practical, 200 feet, from waters of the United States including wetlands.	
Avoid work in jurisdictional waters through the use of steel casings, either jack and bored or hammered, under unnamed streams and irrigation ditches as outlined in the Environmental Review Record, City of Driggs, Water Improvement Project. This would keep construction outside of the ordinary high water mark and would allow construction and maintenance without surface disturbance of streams and irrigation ditches.	
If cultural resources are uncovered during construction, all work must cease in the immediate vicinity of the find and the City must contact the Idaho State Historic Preservation Officer (SHPO) and the Shoshone-Bannock Cultural Resources Section. Work shall not recommence within the area of the find until the situation has been discussed with the SHPO and the Tribe.	

NPWOM 200-1-1: When conditions for development or mitigation activities are prescribed through preparation of environmental documents, the District proponent shall be responsible for ensuring that such conditions or activities are taken into account, that such features are incorporated in schedules and budgets, and are designed, constructed, and installed as described. Environmental Resources Branch (now Environmental Compliance and Cultural Resources Sections) shall be responsible for monitoring to ensure that such conditions are incorporated and mitigation is accomplished and maintained as described in the environmental document.
