

FEB 22 2000

Dear Brigadier General Carl Strock,

I think the breaching of the dam's should be postponed for a couple of years until scientists can develop a super conductor to minimize the effort needed to give power to the north west. A couple more reasons for not breaching the dams are.

1. It costs about \$5 to 15 million dollars to build a dam and costs about that much to breach them.
2. The salmon fishing should be limited to 5 salmon a week.
3. Scientists are on the verge of developing a super conductor that will still have the same super conductivity when it's at 212°F as when it's at 100°.
4. The breaching of the dams would make P.F.L. shutdown, and P.F.I. is where I got the paper that I am writing on right now. It would make a lot of people unemployed, and we wouldn't have large reservoirs to boat, fish, and swim in.

Sincerely,

Jacob Lincoln
