Subject: Attn: Lower Snake River Study

Draft Environmental Impact Statement and "All-H" Paper.

Please choose the option that makes sense scientifically, economically, and for our future: removing the four dams on the lower Snake River. Act now or all species of salmon and steelhead will be extinct if we don't make the decision to remove these dams.

Dam removal in any option chosen to recover Snake River salmon. A team of federal, tribal, state and independent scientists found that the best option to recover all species of salmon and steelhead on the Snake River is to remove these four dams.

Fully analyze the impact dams have on the Northwest, including the economic effects on fishing communities and compliance with the Clean Water Act.

Thank You,
