Subject: Salmon in the northwest

Please take into consideration the survival of the salmon and steelhead by removal of northwest river impediments placed there by the Corps. of Engineers over the years.

Nature knows best, not the U.S. Government. Hasn't that been demonstrated enough?

Here's a vote for nature. **I'll let you know when I wish to vote for placing cement and steel on our western rivers.** For now, let's correct the mistakes made in the past by removing man-made impediments to fish migration and mating.
