Dear Corps of Engineers,

Its seems that this descision should be made on the basis of what is best for the Salmon.

All other considerations are secondary.

It is not democratic that 10,000 miners, ranchers, lumber people, and farmers (who control the legislature who have the last say over all the communities that make their living depending on a healthy ecosystems administered by the Federal Government. Why should this group prevail over 50 thousand in the recreation and another 50,000 indirect jobs in the state.

If we are a democracy lets run it like one !!!!!!!
