TO: Federal Salmon Managers, U.S. Army Corps of Engineers and Federal Caucus

I agree with the broad scientific consensus that the four dams on Washington's Lower Snake River must be removed to help save the endangered Snake River salmon. These dams are killing salmon by slowing their migration to the sea and blocking their return to spawn. The benefits of these dams can be readily replaced, and removing the dams is a less costly salmon recovery option that will create new jobs and lasting economic benefits to the region. Don't delay this critical decision and risk driving the Snake River Salmon to extinction!

Remove the Dams And Save the Salmon ... Today!
