## **Little Goose Dam reopened to public vehicle crossings**

**STARBUCK, Wash.** – U.S. Army Corps of Engineers officials have reopened Little Goose Lock and Dam to public vehicle crossings.

Public vehicle crossings were suspended on Monday to facilitate safe working conditions while a critical repair task was being performed upon the dam's upstream navigation lock gate.

Walla Walla District reminds the public that Little Goose Dam remains a construction site while on-going repairs are made to the navigation lock. For this reason, members of the public may be asked to wait extended periods of time until permission to cross Little Goose Lock and Dam can be safely made, depending upon working conditions.

For the most up-to-date public crossing information for dams in the Walla Walla District, call 1-888-DAM-INFO (326-4636).
